Artificial Intelligence with Common Lisp James L. Noyes,1992 The book provides a balanced survey of the fundamentals of artificial intelligence emphasizing the relationship between symbolic and numeric processing The text is structured around an innovative interactive combination of LISP programming and AI it uses the constructs of the programming language to help readers understand the array of artificial intelligence concepts presented After an overview of the field of artificial intelligence the text presents the fundamentals of LISP explaining the language s features in more detail than any other AI text Common Lisp is then used consistently in both programming exercises and plentiful examples of actual AI code Back cover This text is intended to provide an introduction to both AI and LISp for those having a background in computer science and mathematics Pref

Developments in Applied Artificial Intelligence Tim Hendtlass, Moonis Ali, 2003-08-02 Artificial Intelligence is a field with a long history which is still very much active and developing today Developments of new and improved techniques together with the ever increasing levels of available computing resources are fueling an increasing spread of AI applications These applications as well as providing the economic rationale for the research also provide the impetus to further improve the performance of our techniques This further improvement today is most likely to come from an understanding of the ways our systems work and therefore of their limitations rather than from ideas borrowed from biology From this understanding comes improvement from improvement comes further application from further application comes the opportunity to further understand the limitations and so the cycle repeats itself indefinitely In this volume are papers on a wide range of topics some describe applications that are only possible as a result of recent developments others describe new developments only just being moved into practical application All the perspectives reflect the way this field continues to drive forward This conference is the 15th in an unbroken series of annual conferences on Industrial and Engineering Application of Artificial Intelligence and Expert Systems organized under the auspices of the International Society of Applied Intelligence

The Software Arts Warren Sack, 2019-04-09 An alternative history of software that places the liberal arts at the very center of software's evolution In *The Software Arts* Warren Sack offers an alternative history of computing that places the arts at the very center of software's evolution Tracing the origins of software to eighteenth century French encyclopedists step by step descriptions of how things were made in the workshops of artists and artisans Sack shows that programming languages are the offspring of an effort to describe the mechanical arts in the language of the liberal arts Sack offers a reading of the texts of computing code algorithms and technical papers that emphasizes continuity between prose and programs He translates concepts and categories from the liberal and mechanical arts including logic rhetoric grammar learning algorithm language and simulation into terms of computer science and then considers their further translation into popular culture where they circulate as forms of digital life He considers among other topics the arithmetization of knowledge that presaged digitization today's multitude of logics the history of demonstration from deduction to newer forms of persuasion and the post Chomsky absence of meaning in grammar With *The Software Arts* Sack invites artists and humanists to see how their ideas are at the
