Spring in Action Craig Walls, Ryan Breidenbach, 2005

Written for enterprise Java developers who have become disillusioned with the complexity and bulk involved with EJB development, this programming tool demonstrates how the Spring framework can make coupled code easy to manage, understand, reuse, and unit test. Spring's employment of inversion control and aspect-oriented programming techniques to encourage loosely coupled code is explained, providing programmers with the ability to use JavaBeans with the power and enterprise services only previously available in the heavier Enterprise JavaBeans.

JBoss in Action Javid Jamae, Peter Johnson, 2009-02-07

POJOs in Action Chris Richardson, 2006-02-02

The standard platform for enterprise application development has been EJB, but the difficulties of working with it caused it to become unpopular. They also gave rise to lightweight technologies such as Hibernate, Spring, JDO, iBATIS, and others, all of which allow the developer to work directly with the simpler POJOs. Now EJB version 3 solves the problems that gave EJB 2 a black eye; it too works with POJOs. *POJOs in Action* describes the new easier ways to develop enterprise Java applications. It describes how to make key design decisions when developing business logic using POJOs, including how to organize and encapsulate the business logic, access the database, manage transactions, and handle database concurrency. This book is a new generation Java applications guide. It

enables readers to successfully build lightweight applications that are easier to develop test and maintain

WebWork in Action Patrick Lightbody, Jason Carreira, 2005-10-08 The only book on WebWork a cutting edge Java web framework written by its two primary developers It shows how to build real world web applications based on Hibernate including advanced techniques like internationalization data validation and component oriented design
