Pattern Recognition with Neural Networks in C++ Abhijit S. Pandya, Robert B. Macy, 2020 The addition of artificial neural network computing to traditional pattern recognition has given rise to a new different and more powerful methodology that is presented in this interesting book This is a practical guide to the application of artificial neural networks Geared toward the practitioner *Pattern Recognition with Neural Networks in C* covers pattern classification and neural network approaches within the same framework Through the book's presentation of underlying theory and numerous practical examples readers gain an understanding that will allow them to make judicious design choices rendering neural application predictable and effective The book provides an intuitive explanation of each method for each network paradigm This discussion is supported by a rigorous mathematical approach where necessary C has emerged as a rich and descriptive means by which concepts models or algorithms can be precisely described For many of the neural network models discussed C programs are presented for the actual implementation Pictorial diagrams and in depth discussions explain each topic Necessary derivative steps for the mathematical models are included so that readers can incorporate new ideas into their programs as the field advances with new developments For each approach the authors clearly state the known theoretical results the known tendencies of the approach and their recommendations for getting the best results from the method The material covered in the book is accessible to working engineers with little or no explicit background in neural networks However the material is presented in sufficient depth so that those with prior knowledge will find this book beneficial *Pattern Recognition with Neural Networks in C* is also suitable for courses in neural networks at an advanced undergraduate or graduate level This book is valuable for academic as well as practical research

Artificial Neural Networks and Statistical Pattern Recognition I.K. Sethi, Anil K Jain, 2014-06-28 With the growing complexity of pattern recognition related problems being solved using Artificial Neural Networks many ANN researchers are grappling with design issues such as the size of the network the number of training patterns and performance assessment and bounds These researchers are continually rediscovering that many learning procedures lack the scaling property the procedures simply fail or yield unsatisfactory results when applied to problems of bigger size Phenomena like these are very familiar to researchers in statistical pattern recognition SPR where the curse of dimensionality is a well known dilemma Issues related to the training and test sample sizes feature space dimensionality and the discriminatory power of different classifier types have all been extensively studied in the SPR literature It appears however that many ANN researchers looking at pattern

recognition problems are not aware of the ties between their field and SPR and are therefore unable to successfully exploit work that has already been done in SPR Similarly many pattern recognition and computer vision researchers do not realize the potential of the ANN approach to solve problems such as feature extraction segmentation and object recognition The present volume is designed as a contribution to the greater interaction between the ANN and SPR research communities
