Replacement Replace the batteries at least once a year or whenever the low battery warning sounds Some newer models come with long life batteries that last up to 10 years Replacement of Units Replace the entire smoke detector unit every 8 10 years as sensors and electronic components degrade over time Combination Detectors Many modern smoke detectors combine both ionization and photoelectric sensors to provide comprehensive protection against both fast flaming and smoldering fires These dual sensor detectors can offer enhanced safety and help reduce the likelihood of false alarms Summary Ionization smoke detectors are an effective and affordable solution for detecting fast flaming fires However for optimal fire protection especially in residential settings it s often recommended to use a combination of ionization and photoelectric smoke detectors or dual sensor units Regular maintenance and proper placement are key to ensuring these devices function correctly and provide early warning in the event of a fire
