*Facility Location* Zvi Drezner, Horst W. Hamacher, 2004-05-03 The book covers both theory and applications of locational analysis LocAn The reader will see the power of LocAn models in various real world contexts varying from communication design to robotics and mail delivery It is divided into two parts The first part contains an overview of some of the LocAn methodologies The second part describes in thorough detail some selected applications

The text provides researchers with an excellent and well thought out review of available location models *Locational Analysis of Public Facilities* Jacques-François Thisse, Henry Zoller, 1983 The concern of economists and location theorists for the problem of public facility location is growing rapidly The present collection of essays aims to provide an overview of the problem both from the perspective of economic theory and operations research A study of some basic ingredients of a public space theory and one on the main tools for spatial decision making are offered This is reflected in the content of the book which is divided into two parts The first part deals with the theory of local public goods and with public decision making procedures in the spatial context A survey of the current literature on local public goods is proposed and contributed papers follow which are devoted to particular aspects or to a critical discussion of the main approaches Voting procedures in a spatial context are reviewed and extended Then follows an application of planning theory to public goods in space The second part is relative to the operational analysis of locational decisions in the public sector The major models and methods are reviewed their computational efficiency is reported on and some of their fundamental properties are discussed Location allocation models are analyzed and criticized from the welfare economics standpoint and some suggestions are made for future research The book addresses a large audience including economists regional scientists operations researchers and geographers interested in the theory of public space and spatial planning *Annotated Bibliographies in Combinatorial Optimization* Mauro Dell'Amico, Francesco Maffioli, Silvano Martello, 1997-08-28 Wiley Interscience Series in Discrete Mathematics and Optimization Advisory Editors Ronald L Graham Jan Karel Lenstra Robert E Tarjan Discrete Mathematics and Optimization involves the study of finite structures and is one of the fastest growing areas in mathematics today The level and depth of recent advances in the area and the wide applicability of its evolving techniques point to the rapidity with which the field is moving and presage the ever increasing interaction between it and computer science The Series provides a broad coverage of discrete mathematics and optimization ranging over such fields as combinatorics graph theory enumeration mathematical programming and the analysis of algorithms and including such topics as Ramsey theory transversal theory block designs finite geometries Polya theory graph and matroid algorithms network flows polyhedral combinatorics and computational complexity The Wiley Interscience Series in Discrete Mathematics and Optimization will be a substantial part of the record in this extraordinary development Recent titles in the Series Local Search in Combinatorial Optimization Edited by Emile H L Aarts Philips Research Laboratories Eindhoven and Eindhoven University of Technology Eindhoven Jan Karel Lenstra Eindhoven University of Technology Eindhoven and CWI Amsterdam In the past three decades local search has grown from a simple heuristic idea into a mature field of research in combinatorial optimization Local search is still the method of choice for NP hard problems as it provides a robust approach for obtaining high quality solutions to problems of a realistic size in a reasonable time This area of discrete mathematics is of great practical use and is attracting ever increasing attention The contributions to this book cover local search and its variants from both a theoretical and

practical point of view each with a chapter written by leading authorities on that particular aspect Chapters 1 to 7 deal with the theory of local search and describe the principal search strategies such as simulated annealing tabu search genetic algorithms and neural networks The remaining chapters present a wealth of results on applications of local search to problems in management science and engineering including the traveling salesman problem vehicle routing machine scheduling VLSI design and code design This book is an important reference volume and an invaluable source of inspiration for advanced students and researchers in discrete mathematics computer science operations research industrial engineering and management science *Modern Trends in Logistics Research* W.
