Cybersecurity, Cyberanalysis and Warning

United States. Government Accountability Office,2009 Cyber analysis and warning capabilities are critical to thwarting computer based cyber threats and attacks The Department of Homeland Security DHS established the United States Computer Emergency Readiness Team US CERT to among other things co ordinate the nation s efforts to prepare for prevent and respond to cyber threats to systems and communications networks The authors objectives were to 1 identify key attributes of cyber analysis and warning capabilities 2 compare these attributes with US CERT s current capabilities to identify whether there are gaps and 3 identify US CERT s challenges to developing and implementing key attributes and a successful national cyber analysis and warning capability To address these objectives the authors identified and analysed related documents observed operations at numerous entities and interviewed responsible officials and experts

Evidence-Based Cybersecurity Pierre-Luc Pomerleau,David Maimon,2022 The prevalence of cyber dependent crimes and illegal activities that can only be performed using a computer computer networks or other forms of information communication technology has significantly increased during the last two decades in the USA and worldwide As a result cybersecurity scholars and practitioners have developed various tools and policies to reduce individuals and organizations

risk of experiencing cyber dependent crimes However although cybersecurity research and tools production efforts have increased substantially very little attention has been devoted to identifying potential comprehensive interventions that consider both human and technical aspects of the local ecology within which these crimes emerge and persist Moreover it appears that rigorous scientific assessments of these technologies and policies in the wild have been dismissed in the process of encouraging innovation and marketing Consequently governmental organizations public and private companies allocate a considerable portion of their operations budgets to protecting their computer and internet infrastructures without understanding the effectiveness of various tools and policies in reducing the myriad of risks they face Unfortunately this practice may complicate organizational workflows and increase costs for government entities businesses and consumers The success of the evidence based approach in improving performance in a wide range of professions for example medicine policing and education leads us to believe that an evidence based cybersecurity approach is critical for improving cybersecurity efforts This book seeks to explain the foundation of the evidence based cybersecurity approach review its relevance in the context of existing security tools and policies and provide concrete examples of how adopting this approach could improve cybersecurity operations and guide policymakers decision making process The evidence based cybersecurity approach explained aims to support security professionals policymakers and individual computer users decision making regarding the deployment of security policies and tools by calling for rigorous scientific investigations of the effectiveness of these policies and mechanisms in achieving their goals to protect critical assets This book illustrates how this approach provides an ideal framework for conceptualizing an interdisciplinary problem like cybersecurity because it stresses moving beyond decision makers political financial social and personal experience backgrounds when adopting cybersecurity tools and policies This approach is also a model in which policy decisions are made based on scientific research findings
