Replaces Editions 1 (December 2014), 2 (February 2014) and 3 (February 2014)

This recommended practice addresses general principles for the safe installation and maintenance of offshore, geotechnically sensitive cranes on fixed or floating offshore platforms, offshore support vessels, jack-up drilling rigs, semi-submersible drilling rigs and other types of mobile offshore drilling units (MODUs). This document also provides recommendations and best practices for personnel working on cranes, crane operations and testing of hoisting cranes that are installed offshore.

These requirements are critical for the safe and sound use of the following:

- a) Offshore oil exploration and production operations. These cranes are typically mounted on a fixed structure, platform, structure, floating platform, structure, or ship-shaped vessel used in drilling and production operations for offshore cranes and rigs.
- b) Offshore operations. These lifting devices (called by API 2D-2000 the **lifting or moving device**) are used to move, transport, install, and/or move items, vessels, vessels, and other materials on the water, between vessels, etc. (for use on 2D-2000).
- c) Hoisting applications. These lifting applications are included on barges, self-erecting cranes or other vessels, and are used to install, lift and lower materials above and below the sea surface.

Equipment as a result of such testing used here for hoisting operations (the tests in 2D-2000 are not included in the scope of this recommended practice).

Lifting devices not covered by this document should be applied, installed and maintained in accordance with the manufacturer's recommendations.
