### LABOR, DELIVERY, AND PLACENTAL

Labor is defined as the process by which the fetus is expelled from the uterus. *Misoprostols* follow regular, rhythmic contractions that lead to dilation and effacement of the cervix. This chapter describes the physiology and normal measurements of labor, labor and delivery.

The physiology of labor involves the uterine muscle activity, cervical dilation, and the placental membranes. The fetus is expelled from the uterus and the placenta is delivered. The process of labor is divided into three phases: the latent phase, the active phase, and the second stage. The latent phase is characterized by irregular, low-intensity contractions that lead to cervical dilation and effacement. The active phase is characterized by regular, high-intensity contractions that lead to cervical dilation and effacement. The second stage is characterized by regular, high-intensity contractions that lead to cervical dilation and effacement. The process of labor is divided into three phases: the latent phase, the active phase, and the second stage. The latent phase is characterized by irregular, low-intensity contractions that lead to cervical dilation and effacement. The active phase is characterized by regular, high-intensity contractions that lead to cervical dilation and effacement. The second stage is characterized by regular, high-intensity contractions that lead to cervical dilation and effacement.

the uterus for the subsequent reproductive phase, which requires gradually plus and contract, resulting regular contractions. In the latent phase, the process of labor may be prolonged, requiring more than an hour. The third phase, active contraction, occurs after delivery and is characterized primarily by intensity. The first three phases of labor require regular contractions and cervical dilation. The process of labor involves gradual dilation and effacement.

The typical normal labor is the initiation of labor. In the latent phase, the cervix is not dilated. In the active phase, the cervix is dilated. In the second stage, the cervix is dilated. The process of labor is divided into three phases: the latent phase, the active phase, and the second stage. The latent phase is characterized by irregular, low-intensity contractions that lead to cervical dilation and effacement. The active phase is characterized by regular, high-intensity contractions that lead to cervical dilation and effacement. The second stage is characterized by regular, high-intensity contractions that lead to cervical dilation and effacement.
