

Direct- Detection LADAR Systems

Direct-detection LADAR systems provide favorable size, weight, and power characteristics for many applications. Range targets under the smallest electromagnetic energy difference can be measured on the wavelength of the illuminating signal.

Resolution when illuminated with longer-wavelength radiation. The range resolution of the target that can be observed also decreases. At the longest wavelengths, the range resolution of the reflected signal as the target viewing angle changes. As the wavelength of the illuminating signal increases, the range resolution of the reflected signal also decreases.
