*The Fiber-optic Gyroscope* Hervé C. Lefèvre, 2014 Two decades after the first edition of this book in the early nineties it has seemed timely to prepare a revised version If the basic design rules of the fiber optic gyroscope FOG have remained unchanged the technology has certainly matured and the expectations presented in the first edition have been largely exceeded For instance navigation grade bias stability 0 01 degree hour was seen as the goal when today strategic grade looks accessible with a bias better than 0 0001 degree hour Written by one of the field s leading experts this landmark reference presents a thorough system analysis of the FOG describing the concepts that have emerged as the preferred solutions for obtaining a practical device Comprehensive appendixes cover the optics single mode fiber optics and integrated optics necessary to understand the fiber gyro and provide an appropriate vocabulary for communicating with electronic component designers This new edition also includes 300 figures to ease the understanding of this multidisciplinary system

*Fiber Optic Gyro Development for Navy Shipboard Inertial Reference Applications* ,1995 This paper describes NCCOSC RDT E Division Detachment s assessment of the viability of using fiber optic gyro technology for Navy shipboard inertial reference system applications Industry fiber optic gyro designs are investigated tested and evaluated This will result in assessment of gyro performance identification of sensor technology deficiencies and promotion of industry development tasks for fiber optic gyro enhancement NCCOSC has completed an in house laboratory evaluation of two industry first generation interferometric fiber optic gyro IFOG designs and is currently directing the development of a second generation IFOG that will be suitable for shipboard gyrocompass system applications This new development incorporates sensor component and architecture advances made by industry to resolve the deficiencies found to be present in first generation IFOGs Litton Guidance and Control Systems was awarded a contract to develop an IFOG design for use in high accuracy stabilized shipboard gyrocompass equipment The gyrocompass IFOGs design and gyro acceptance testing of the two demonstration IFOGs conducted at the Litton Woodland Hills facility is described Acceptance test results are presented and are shown to be consistent with contract requirements A discussion of the ongoing laboratory evaluation by NCCOSC of the Litton hardware deliverables is also provided

IFOG Technology for Gyrocompass Applications ,1996 Interferometric fiber optic gyros IFOGs were fabricated and evaluated to demonstrate the feasibility of their use as rotation rate sensors within replacement gyrocompass systems Bias repeatability of 0 008 deg hr input axis misalignment repeatability of 0 68 arcsec scale factor repeatability of 4 5 ppm and angle random walk of 0 0034 deg hr were demonstrated The measured gyro performance was included within system simulations to predict overall system performance for a series of gyrocompass scenarios The results of the simulations showed that when mechanized with IFOGs similar to those tested the performance specifications of the AN WSN 2 2A gyrocompass can be achieved without the need for a vertical axis turntable for periodic self calibration IFOGs were shown to be a strong candidate for the rotation rate sensors within upgrades and future Navy gyrocompass systems
