

Question 1

Determine the elevation difference Δh , between the water levels in the two open tanks shown in the figure below.

Solution 1

For manometer problems, it is vital that you define $z=0$ first! Here we choose the free-surface level of container, ① as the $z=0$, then we play the point-to-point trick as I did in the lecture example. Remember the two points in one equation must be within the same fluid!

From A to B:

$$0 + 0 = p_B + \rho g(h_c + h_m)$$

From B to C:

$$p_B + \rho_m g(h_c + h_m) = p_C + \rho_m g h_c$$

From C to D:

$$p_C + \rho g h_c = 0 - \rho g \Delta h$$

In the three equations above, there are only three unknown variables, namely p_B , p_C and Δh , so solve them to get:

$$\Delta h = 0.04 \text{ m}$$

Potter, 2009-06-14 Your solution to mastering fluid mechanics. Need to learn about the properties of liquids and gases, the pressures and forces they exert. Here's your lifeline. Fluid Mechanics Demystified helps you absorb the essentials of this challenging engineering topic. Written in an easy-to-follow format, this practical guide begins by reviewing basic principles and discussing fluid statics. Next, you'll dive into fluids in motion, integral and differential equations, dimensional analysis, and similitude. Internal, external, and compressible flows are also covered. Hundreds of worked examples and equations make it easy to understand the material, and end-of-chapter quizzes and two final exams with solutions to all their problems help reinforce learning. This hands-on self-teaching text offers numerous figures to illustrate key concepts. Details on Bernoulli's equation and the Reynolds number. Coverage of entrance, laminar, turbulent, open channel, and boundary layer flows. SI units throughout. A time-saving approach to performing better on an exam or at work. Simple enough for a beginner but challenging enough for an advanced student.
