developed by the community with strong leadership guiding the language's future direction and how it should be utilized. Go is designed to be easy to use, simple to learn, and easy for other developers to read. Go's feature set is somewhat small, especially in comparison to other programming languages like C. Because of its syntax, which is similar to that of C, Go is relatively simple for experienced C developers to understand. Nevertheless, a lot of Go's features, particularly its functional programming and concurrency features, are reminiscent of Erlang and other older languages. Go shares many similarities with Java as a C-like language for creating and managing cross-platform enterprise applications of various kinds. You might also compare Go and Python to facilitate the quick construction of code that might execute anywhere, but the distinctions between the two languages are much more than the similarities. Quick, statically typed, compiled language that feels like a dynamically typed, interpreted language is how the Go documentation characterizes Go. Even a big Go program can be compiled in a few seconds. Additionally, Go does not have as much overhead as C. Go includes files and libraries.
