Vertical Aeroponics System Michelle Bates Ph D, 2020-05-22 Aeroponics like hydroponics deals with growing plants without using soil Once soil is taken from the equation all that is left is water air and nutrients The air becomes the growing medium rather than the soil It is then left to me to measure the nutrient solution or the fertilizer being mixed into the water The lid must be secure to block out all light from hitting the roots dangling inside the aeroponic system therefore the humidity will stay at 100 percent while oxygen rich nutrient solution sprays the roots all day For pretty much all of Time plants have been confined to growing in soil and therefore have had to grow horizontally roots down stems and leaves up The advent and popularization of hydroponics changed all that By isolating the nutrients and minerals from the soil and adding them directly into water plants were able to grow freely away from the ground giving rise to the practice of vertical farming By 2050 the world s population is expected to grow by another 2 billion people and feeding it will be a huge challenge Due to industrial development and urbanization we are losing arable lands every day Scientists say that the Earth has lost a third of its arable lands over the last 40 years We don t know how much more we are going to lose in the next 40 years Increasing food demand due to a growing population along with ever decreasing arable lands poses one of the greatest challenges facing us Many believe that vertical farming can be the answer to this challenge
