Robust Range Image Registration Luciano Afonso da Silva, Olga R. P. Bellon, Kim L. Boyer, 2005 Provides a comprehensive review of the literature in range image registration and serves as an effective study guide on this important topic Presents a novel robust error measure the surface interpretation which is easily computed and offers significant immunity to non Gaussian errors The shortcomings of the least squares formalism in this setting are carefully explored The first substantive work focusing on precision alignment and the first capable of attaining such alignments in low overlap scenarios without human intervention or manual prealignment Offers extensive experimental results highlighting both the impact of robust measures and the relative efficiency of genetic search algorithms versus more traditional approaches Extensive comparisons with more traditional algorithms and measures are presented

Image Registration with Simulated Annealing and Genetic Algorithms, 2006 *Retrospective Image Registration with Genetic Algorithms* Guo Jun Bao, 2000 *High Performance Deformable Image Registration Algorithms for Manycore Processors* James Shackelford, Nagarajan Kandasamy, Gregory Sharp, 2013-06-28 High Performance Deformable Image Registration Algorithms for Manycore Processors develops highly data parallel image registration algorithms suitable for use on modern multi core architectures including graphics processing units GPUs Focusing on deformable registration we show how to develop data parallel versions of the registration algorithm suitable for execution on the GPU Image registration is the process of aligning two or more images into a common coordinate frame and is a fundamental step to be able to compare or fuse data obtained from different sensor measurements Extracting useful information from 2D 3D data is essential to realizing key technologies underlying our daily lives Examples include autonomous vehicles and humanoid robots that can recognize and manipulate objects in cluttered environments using stereo vision and laser sensing and medical imaging to localize and diagnose tumors in internal organs using data captured by CT MRI scans Demonstrates how to redesign widely used image registration algorithms so as to best expose the underlying parallelism available in these algorithms Shows how to pose and implement the parallel versions of the algorithms within the single instruction multiple data SIMD model supported by GPUs Provides Programming tricks that can help readers develop other image processing algorithms including registration algorithms for the GPU

Studies on Genetic Algorithms in Image Processing A. P. Shanthini, A. Antony, S. J., T. Francis, 2012 Computer Vision is a branch of Computer Science and Engineering that aims to develop methods for electronically perceiving and understanding images The objective of this work is to use this technique to develop algorithms

for rigid body image registration and to prove that it is a versatile algorithm for evolutionary image registration Genetic Algorithm is used to find procedures to convert a binary image into another containing just a particular characteristic of interest The study in this thesis is both theoretical and applied in nature On the theoretical side a method for image registration is proposed and the gradient analysis of fitness functions is analysed In addition a method is developed to study the mathematical morphology of binary images On the application side Genetic Algorithm is applied to generate genetically optimized parameters to consistently yield image results comparable to those of their ideal counterparts

Evolutionary Image Analysis and Signal Processing Stefano Cagnoni, 2009-07-09 The publication of this book on evolutionaryImage Analysis and Signal P cessing IASP has two main goals The rst occasional one is to celebrate the 10th

edition of EvoIASP the workshop which has been the only event specifically dedicated to this topic since 1999 The second more important one is to give an overview of the opportunities offered by Evolutionary Computation EC techniques to computer vision pattern recognition and image and signal processing It is not possible to celebrate EvoIASP properly without first acknowledging EvoNET the EU funded network of excellence which has made it possible for Europe to build a strong European research community on EC Thanks to the success of the first pioneering event organized by EvoNET held in 1998 in Paris it was possible to realize that not only was EC a fertile ground for basic research but also there were several application fields to which EC techniques could offer a valuable contribution That was how the idea of creating a single event EvoWorkshops out of a collection of workshops dedicated to applications of EC was born Amongst the possible application fields for EC IASP was selected almost accidentally due to the occasional presence within EvoNET of less than a handful of researchers who were interested in it I would lie if I stated that the event was a great success since its very start but it was successful enough to survive healthily for a couple of years before reaching its present size relevance and popularity
