Ochs* Raymond S. Ochs, 2014 **Metabolic Structure and Regulation** Raymond S. Ochs, 2017-12-14 There is a renewed interest in the fundamentals of energy metabolism yet most people base their understanding on the views of generalists expressed in elementary textbooks New techniques that enable analysis of thousands of metabolites provide useful data but do not themselves substitute for an understanding of the fundamentals of metabolism While classical ideas of metabolism are also valuable some earlier ideas have not withstood further investigation This book presents a personal philosophy but rests on what is broadly accepted by metabolic biochemists over the past few decades [Advances in Comparative Physiology and Biochemistry V6](#) O Lowenstein, 2012-12-02 *Advances in Comparative Physiology and Biochemistry* Volume 6 presents three papers linked by their relevance to comparative neurophysiology The first paper on high frequency hearing in mammals examines the sensitivity to production and behavioral utilization of high frequency sound for a wide range of mammals from bats rodents whales dolphins and seals to the insectivores primates edentates and carnivores The second paper examines axonal flow and fast transport in nerves Special attention is given to the differences in substrate and mechanism in slow and fast transport The neuron is presented as a suitable cell type for the investigation of intracellular transport in general The third paper on the secretory activity of neurons and related electrical activity presents

a comparative assessment of all neurocrine activities including those in the service of neuroendocrine coordination or of synaptic transmission of information Special attention is given to the nature of vesicles containing the neurosecretions and transmitter substances and to the mechanisms of release The electrical events accompanying such neurocrine activities are discussed *Studyguide for Biochemistry by Raymond S. Moran, Raymond S. Ochs, J. David Rawn, K. Gray Scrimgeour, 2002 For introductory courses in Biochemistry This concise introductory text focuses on the basic principles of biochemistry filling the gap between the encyclopedic volumes and the cursory overview texts *Molecular Biology, Biochemistry, and Biophysics*, 2000 NINCDS Monograph, 1976 **Chemical and Cellular Architecture** Abel Lajtha, 2013-04-18 After the completion of the first edition of this series this editor thought that a new edition would not be warranted in less than 20 years but it seems that we live in a time in which rapid changes are the norm and findings in a field such as neurochemistry develop exponentially The task of a future editor attempting to get a comprehensive neurochemical handbook for the year 2000 would be even less enviable but by then information processing may be very different The approach the design and the areas covered by each volume and each chapter are necessarily arbitrary and it is likely that other editors or authors would have approached the coverage or the organization in a different manner It is hoped however that readers will find the series helpful for beginning or for continuing work There may be some overlap among the various chapters but insisting on single coverage of an area would at times have restricted treatment to only one point of view and might have truncated and hurt the logical flow of some of the chapters **Public Health Reports**, 1952 Cumulated Index Medicus, 1984 *Annual Review of Biochemistry* Charles C. Richardson, 1995-06 **Comprehensive Biochemistry** Marcel Florin, Elmer Henry Stotz, 1986 Axoplasmic Transport Zafar Iqbal, 2018-05-04 Axoplasmic transport is the intracellular movement of cellular components required for the maintenance and normal physiological functioning of neuronal cells This book provides an up to date reference for both established investigators as well as for those entering in the field This volume describes the history and methods of the study of transport and the involvement of energy ions calmodulin microtubules and other cellular components in transport It also

discusses the transport of polypeptides lipids nucleic acids neurotransmitter containing components and various other particles in nerve fibres A significant portion of this book is devoted to axoplasmic transport regeneration and the relevance of transport in neurotropic functions are described in the first four chapters followed by a discussion on the mechanism of axoplasmic transport
