Biomorphic Architecture:

Biomorphic architecture Günther Feuerstein,2002 **Building for Life** Stephen R. Kellert,2012-09-26 Sustainable design has made great strides in recent years unfortunately it still falls short of fully integrating nature into our built environment Through a groundbreaking new paradigm of restorative environmental design award winning author Stephen R Kellert proposes a new architectural model of sustainability In Building For Life Kellert examines the fundamental interconnectedness of people and nature and how the loss of this connection results in a diminished quality of life This thoughtful new work illustrates how architects and designers can use simple methods to address our innate needs for contact with nature Through the use of natural lighting ventilation and materials as well as more unexpected methodologies the use of metaphor perspective enticement and symbol architects can greatly enhance our daily lives These design techniques foster intellectual development relaxation and physical and emotional well being In the works of architects like Frank Lloyd Wright Eero Saarinen Cesar Pelli Norman Foster and Michael Hopkins Kellert sees the success of these strategies and presents models for moving forward Ultimately Kellert views our fractured relationship with nature as a design problem rather than an unavoidable aspect of modern life and he proposes many practical and creative solutions for cultivating a more rewarding experience of nature in our built environment

Neural Information Processing and VLSI Bing J. Sheu,Joongho Choi,2012-12-06 Neural Information Processing and VLSI provides a unified treatment of this

important subject for use in classrooms industry and research laboratories in order to develop advanced artificial and biologically inspired neural networks using compact analog and digital VLSI parallel processing techniques Neural Information Processing and VLSI systematically presents various neural network paradigms computing architectures and the associated electronic optical implementations using efficient VLSI design methodologies Conventional digital machines cannot perform computationally intensive tasks with satisfactory performance in such areas as intelligent perception including visual and auditory signal processing recognition understanding and logical reasoning where the human being and even a small living animal can do a superb job Recent research advances in artificial and biological neural networks have established an important foundation for high performance information processing with more efficient use of computing resources The secret lies in the design optimization at various levels of computing and communication of intelligent machines Each neural network system consists of massively paralleled and distributed signal processors with every processor performing very simple operations thus consuming little power Large computational capabilities of these systems in the range of some hundred giga to several tera operations per second are derived from collectively parallel processing and efficient data routing through well structured interconnection networks Deep submicron very large scale integration VLSI technologies can integrate tens of millions of transistors in a single silicon chip for complex signal processing and information manipulation The book is suitable for those interested in efficient neurocomputing as well as those curious about neural network system applications It has been especially prepared for use as a text for advanced undergraduate and first year graduate students and is an excellent reference book for researchers and scientists working in the fields covered

Imaginary Cities Darran Anderson, 2024-05-31 For as long as humans have gathered in cities those cities have had their shining or shadowy counterparts Imaginary cities potential cities future cities perfect cities It is as if the city itself its inescapable gritty reality and elbow to elbow nature demands we call into being some alternative yearned for better place This book is about those cities It is neither a history of grand plans nor a literary exploration of the utopian impulse but rather something different hybrid idiosyncratic It is a magpie's book full of characters and incidents and ideas drawn from cities real and imagined around the globe and throughout history Thomas More's allegorical island shares space with Soviet mega planning Marco Polo links up with James Joyce's meticulously imagined Dublin the medieval land of Cockaigne meets the hopeful future of Star Trek With Darran Anderson as our guide we find common themes and recurring dreams tied to the seemingly ineluctable problems of our actual cities of poverty and exclusion and waste and destruction And that is where *Imaginary Cities* becomes more than a mere if ecstatically entertaining intellectual exercise for as Anderson says If a city can be imagined into being it can be re imagined Every architect philosopher artist writer planner or citizen who dreams up an imaginary city offers lessons for our real ones harnessing those flights of hopeful fancy can help us improve the streets where we live Though it shares DNA with books as disparate as Calvino's *Invisible Cities* and Jane Jacobs's *Death and Life of Great*

American Cities there s no other book quite like *Imaginary Cities* After reading it you ll walk the streets of your city real or imagined with fresh eyes *Towards Users' Optimal and Pleasurable Experience in Smart Environments* Mi Jeong Kim,Xiangyu Wang,Inhan Kim,2020-12-23 This eBook is a collection of articles from a Frontiers Research Topic Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series they are collections of at least ten articles all centered on a particular subject With their unique mix of varied contributions from Original Research to Review Articles Frontiers Research Topics unify the most influential researchers the latest key findings and historical advances in a hot research area Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office frontiersin.org/about/contact

shapes and sizes encountered in seeds is nearly endless and ranges from the impressive Seychelles nut at twenty kilos to the dustlike seeds of the orchids. No matter how small, packed into every seed is the complete genetic information needed to give rise to a new plant, whether it is a tiny herb or a giant rainforest tree. True time capsules of life, seeds may travel thousands of miles and, if necessary, wait for hundreds of years before germinating.
