

Cooling Theory Lectures Notes

Markus Hupfer and members of the team!

September 7, 2024

These are the notes for the first lecture, *Foundations of Cooling Theory*. These are generalised and give insights on problems for all of the cooling gases, from the perspective of the results on the lecture, the likely contribution to Cooling Theory and the needs of different and their possibilities of their cooling gases. I also used some other sources for additional material, such as Part II course book of Cambridge on Cooling Theory and Thermodynamics given by Professor John Kestin, and the other course book from a Cambridge book on Subatomic Thermodynamics given by Professor Eric Fermi. I also included some more about other's work, Applied Math for the Phys. Department. The last sentence of the notes is based on Hugh Everett's course notes, "Group Theory Course".

All numbers by these notes are my best!
