Contending Theories of International Relations [by] James E. Dougherty [and] Robert L. Pfaltzgraff, Jr James E. Dougherty, 1917 *Systems, Relations, and the Structures of International Societies* Jack Donnelly, 2023-10-25 Inspired by recent work in evolutionary developmental and systems biology *Systems Relations and the Structures of International Societies* sketches a robust conception of systems that grounds a new conception of levels of organization not merely analysis Understanding international systems as multi level multi actor complex adaptive systems allows explanations of important features of the world that are inaccessible to dominant causal and rationalist explanatory strategies It also develops a comprehensive critique of IR's dominant conception of systems and structures narrow rigid and unfruitful presents a novel conception of the interrelationship of the social production of continuities and the social production of change and sketches models of spatio political structure that cast new light on the development of international systems including a distinctive account of the nature of globalization

International Relations and Scientific Progress Patrick James, 2002 *International Relations and Scientific Progress* contends that a theory focusing on the structure of the international system explains a wider and more interesting range of events in world politics than other theories Such theorizing appears to be out of favor as the result of the apparent failure by structural realism the most prominent system level theory over the last two decades on any number of fronts most notably an inability to anticipate the ending of the Cold War and its aftermath This new book is put forward as the most comprehensive and innovative theoretical work on paradigms in international relations since the publication of *Theory of International Politics* which created structural realism more than two decades ago With appropriate revisions however structural realist theory can compete effectively and reclaim its primacy The first part of *International Relations and Scientific Progress* assesses the meaning of progress in the discipline of international relations a process that culminates in the creation of a new concept the scientific research enterprise The second part reviews structural realism within that context and identifies a lack of connection between theory and research that links power based indicators to international conflict crisis and war This part of the book makes the case

for an elaboration of structural realism by showing that a system level theory based on structure has great unrealized explanatory potential By comparison the current overwhelmingly research oriented agenda on state dyads imposes severe limitations on understanding that are not currently appreciated Part Three sums up the work and explores new directions most notably as related to empirical testing of an elaborated version of structural realism that focuses on both continuity and change in the international system

Examining US-China-Russia Foreign Relations Gregory O. Hall, 2023-03-03
Examining US China Russia Foreign Relations explores the changing nature and function of the US China Russia strategic triangle from the end of the Cold War up to the present Gregory Hall uses neoclassical realist international relations IR theory to argue that since the mid 2000s the politics of the strategic triangle have been increasingly influenced by factors related to the Big3 countries respective domestic environments Hall utilizes agency and context for each of the three great powers expanding on previously established frameworks to include a comparative analysis of each actor s domestic environment for foreign policy and the interplay between the domestic and external contexts In IR terms the book identifies and illustrates how factors including systemic state and societal individuals and small groups influence the foreign relations of the Big3 Hall concludes by exploring the future prospects for great power relations and for global affairs Incorporating both theoretical and empirical data to offer a fresh and timely look at the myriad challenges facing the three powers this book provides an excellent companion to students of foreign policy international security and post Cold War international politics

Professionalization of Foreign Policy Michael Haas, 2023-10-16 This book identifies why presidents prime ministers and other leaders of countries often make blunders in foreign policy Blunders have been recognized within the study of foreign policy but no central methodology or theory has developed to provide a way to avoid future disasters Options are often presented to leaders of countries by advisers who do not always assess which policies will best serve national interests Presidents prime ministers and other leaders of countries then have their legacy judged accordingly Therefore the book reviews existing efforts at developing theories of foreign policy to determine why they have failed Instead of allowing a discipline with a lot of competing theories to continue to flounder the book consolidates all approaches and develops a new professional format that will serve to professionalize foreign policy decision making so that fewer key decisions are ever again considered blunders

Cyber Blockades Alison Lawlor Russell, 2014-11-05 Cyber Blockades is the first book to examine the phenomena of blockade operations in cyberspace large scale attacks on infrastructure or systems that aim to prevent an entire state from sending or receiving electronic data Cyber blockades can take place through digital physical and or electromagnetic means Blockade operations have historically been considered acts of war thus their emergence in cyberspace has significant implications for international law and for our understanding of cyber warfare The author defines and explains the emerging concept of cyber blockades and presents a unique comparison of blockade operations in five different domains on land at sea in the air in space and in cyberspace identifying common elements as well as important

distinctions Alison Lawlor Russell's framework for defining cyber blockades understanding how they occur and considering the motivations of actors who employ them is applied with in depth analysis of the cyber attacks on Estonia in 2007 and on Georgia during the 2008 Georgia Russia War Blockade operations have occurred in cyberspace and will doubtlessly be used again in the future by both state and non state actors alike because of the unique advantages of this type of attack This book offers recommendations for policymakers contemplating or confronted by such attacks Cyber Blockades is also a must read for scholars and students of security studies terrorism substate groups and the future of warfare

Constructing a Chinese School of International Relations Yongjin Zhang, Teng-Chi Chang, 2016-06-10 This edited volume offers arguably the first systemic and critical assessment of the debates about and contestations to the construction of a putative Chinese School of IR as sociological realities in the context of China's rapid rise to a global power status Contributors to this volume scrutinize a particular approach to worlding beyond the West as a conscious effort to produce alternative knowledge in an increasingly globalized discipline of IR Collectively they grapple with the pitfalls and implications of such intellectual creativity drawing upon local traditions and concerns knowledge claims and indigenous sources for the global production of knowledge of IR They also consider critically how such assertions of Chinese voices and articulation of their ambition for theoretical innovation from the disciplinary margins contribute to the emergence of a Global IR as a truly inclusive discipline that recognizes its multiple and diverse foundations Reflecting the varied perspectives of both the active participants in the Chinese School of IR debates within China and the observers and critics outside China this work will be of great interest to students and scholars of IR theory Non Western IR and Chinese Studies

Armed Humanitarians Robert C. DiPrizio, 2002-09-27 Since the end of the Cold War the U.S. military has found itself embroiled in many operations other than war Most controversial of these have been humanitarian interventions which often lacked a clear majority of either elite or public support Although the immediate threat represented by the events of September 11 2001 has coalesced public opinion behind the Bush administration's antiterrorism campaign it is likely that the debate over humanitarian interventions will again take center stage in the coming years In this book political scientist Robert C. DiPrizio examines representative case studies from the recent past to offers insight into how a sitting president might or should respond to such future emergencies DiPrizio examines the factors that lay behind U.S. decisions to send

troops into civil conflicts abroad analyzing both the decision making process and the domestic and international constraints placed upon them Focusing on the administrations of George H W Bush and Bill Clinton he shows that the president remains the chief player in such decision making and through six case studies northern Iraq Somalia Rwanda Haiti Bosnia and Kosovo he looks in detail at both positive and negative intervention decisions DiPrizio finds that in each of these cases motivating factors included a different mix of soft security concerns such as refugee flows regional stability alliance credibility and interalliance tensions true humanitarian concerns and domestic politics DiPrizio concludes with a discussion of the possible impact of America s ongoing antiterrorism campaign on the current Bush administration s policy on humanitarian interventions
