Applied Cryptography and Network Security ,2005      Identity-based Cryptography Marc Joye, Gregory Neven, 2009 What if your public key was not some random looking bit string but simply your name or email address This idea put forward by Adi Shamir back in 1984 still keeps cryptographers busy today Some cryptographic primitives like signatures were easily adapted to this new identity based setting but for others including encryption it was not until recently that the first practical solutions were found The advent of pairings to cryptography caused a boom in the current state of the art is this active subfield from the mathematical background of pairing and the main cryptographic constructions to software and hardware implementation issues This volume bundles fourteen contributed chapters written by experts in the field and is suitable for a wide audience of scientists grad students and implementors alike Book Jacket      **Protocols for Authentication and Key Establishment** Colin Boyd, Anish Mathuria, Douglas Stebila, 2019-11-06 This book is the most comprehensive and integrated treatment of the protocols required for authentication and key establishment In a clear uniform presentation the authors classify most protocols in terms of their properties and resource requirements and describe all the main attack types so the reader can quickly evaluate protocols for particular applications In this edition the authors introduced new chapters and updated the text throughout in response to new developments and updated standards The first chapter an introduction to authentication and key establishment provides the necessary background on cryptography attack scenarios and protocol goals A new chapter computational security models describes computational models for key exchange and authentication and will help readers understand what a computational proof provides and how to compare the different computational models in use In the subsequent chapters the authors explain protocols that use shared key cryptography authentication and key transport using public key cryptography key agreement protocols the Transport Layer Security protocol identity based key agreement password based protocols and group key establishment The book is a suitable graduate level introduction and a reference and overview for researchers and practitioners with 225 concrete protocols described In the appendices the authors list and summarize the relevant standards linking them to the main book text when appropriate and they offer a short tutorial on how to build a key establishment protocol The book also includes a list of protocols a list of attacks a summary of the notation used in the book general and protocol indexes and an extensive bibliography
