The application of biologically engineered solutions to environmental problems has become far more readily acceptable and widely understood. However, there remains some uncertainty amongst practitioners regarding how and where the microscopic functional level fits into the macroscopic practical applications. It is precisely this gap which the book sets out to fill. Dividing the topic into logical strands covering pollution, waste and manufacturing, the book examines the potential for biotechnological interventions and current industrial practice with the underpinning microbial techniques and methods described in context against this background. Each chapter is supported by located case studies from a range of industries and countries to provide readers with an overview of the range of applications for biotechnology. Essential reading for undergraduates and Masters students taking modules in Biotechnology or Pollution Control as part of Environmental Science, Environmental Management or Environmental Biology programmes. It is also suitable for professionals involved with water waste management and pollution control.

**Comprehensive Water Quality and Purification**, 2013-09-24. Comprehensive Water Quality and Purification Four Volume Set provides a rich source of methods for analyzing water to assure its safety from natural and deliberate contaminants including those that are added because of carelessness of human endeavors. Human development has great impact on water quality and new contaminants are emerging every day. The issues of sampling for water analysis, regulatory considerations and forensics in water quality and purity investigations are covered in detail. Microbial as well as chemical contaminations from inorganic compounds, radionuclides, volatile and semivolatile compounds, disinfectants, herbicides and pharmaceuticals including endocrine disruptors are treated extensively. Researchers must be aware of all sources of contamination and know how to prescribe techniques for removing them from our water supply. Unlike other works published to date that concentrate on issues of water supply, water resource management, hydrology and water use by industry, this work is more tightly focused on the monitoring and improvement of the quality of existing water supplies and the recovery of wastewater via new and standard separation techniques. Using analytical chemistry methods offers remediation advice on pollutants and contaminants in addition to providing the critical identification perspective. The players in the global boom of water purification are numerous and varied. Having worked extensively in academia and industry, the Editor in Chief has been careful about constructing a work for a shared audience and cause.
