Flight Stability and Automatic Control Robert C. Nelson, 1998 This edition of this flight stability and controls guide features an unimposing math level full coverage of terminology and expanded discussions of classical to modern control theory and autopilot designs Extensive examples problems and historical notes make this concise book a vital addition to the engineer's library

Flight Stability and Automatic Control Robert C. Nelson, 1989 **Flight Dynamics and Control of Aero and Space Vehicles** Rama K. Yedavalli, 2020-02-25 Flight Vehicle Dynamics and Control Rama K Yedavalli The Ohio State University USA A comprehensive textbook which presents flight vehicle dynamics and control in a unified framework Flight Vehicle Dynamics and Control presents the dynamics and control of various flight vehicles including aircraft spacecraft helicopter missiles etc in a unified framework It covers the fundamental topics in the dynamics and control of these flight vehicles highlighting shared points as well as differences in dynamics and control issues making use of the systems level viewpoint The book begins with the derivation of the equations of motion for a general rigid body and then delineates the differences between the dynamics of various flight vehicles in a fundamental way It then focuses on the dynamic equations with application to these various flight vehicles concentrating more on aircraft and spacecraft cases Then the control systems analysis and design is carried out both from transfer function classical control as well as modern state space control points of view Illustrative examples of application to atmospheric and space vehicles are presented emphasizing the systems level viewpoint of control design Key features Provides a comprehensive treatment of dynamics and control of various flight vehicles in a single volume Contains worked out examples including MATLAB examples and end of chapter homework problems Suitable as a single textbook for a sequence of undergraduate courses on flight vehicle dynamics and control Accompanied by a website that includes additional problems and a solutions manual The book is essential reading for undergraduate students in mechanical and aerospace engineering engineers working on flight vehicle control and researchers from other engineering backgrounds working on related topics

Fighter Aircraft Maneuver Limiting Using MPC: Theory and Application Daniel Simon, 2017-09-12 Flight control design for modern fighter aircraft is a challenging task Aircraft are dynamical systems which naturally contain a variety of constraints and nonlinearities such as e.g maximum permissible load factor angle of attack and control surface deflections Taking these limitations into account in the design of control systems is becoming increasingly important as the performance and complexity of the aircraft is constantly increasing The aeronautical industry has traditionally applied feedforward anti windup or similar techniques and different ad hoc engineering solutions to handle constraints on the aircraft However these approaches often rely on engineering experience and insight rather than a theoretical foundation and can often require a tremendous amount of time to tune In this thesis we investigate model predictive control as an alternative design tool to handle the constraints that arise in the flight control design We derive a simple reference tracking MPC algorithm for linear systems that build on the

dual mode formulation with guaranteed stability and low complexity suitable for implementation in real time safety critical systems To reduce the computational burden of nonlinear model predictive control we propose a method to handle the nonlinear constraints using a set of dynamically generated local inner polytopic approximations The main benefit of the proposed method is that while computationally cheap it still can guarantee recursive feasibility and convergence An alternative to deriving MPC algorithms with guaranteed stability properties is to analyze the closed loop stability post design Here we focus on deriving a tool based on Mixed Integer Linear Programming for analysis of the closed loop stability and robust stability of linear systems controlled with MPC controllers To test the performance of model predictive control for a real world example we design and implement a standard MPC controller in the development simulator for the JAS 39 Gripen aircraft at Saab Aeronautics This part of the thesis focuses on practical and tuning aspects of designing MPC controllers for fighter aircraft Finally we have compared the MPC design with an alternative approach to maneuver limiting using a command governor
