**Longitudinal Data Analysis** Jason Newsom,Richard N. Jones,Scott M. Hofer,2013-06-19 This book provides accessible treatment to state of the art approaches to analyzing longitudinal studies Comprehensive coverage of the most popular analysis tools allows readers to pick and choose the

techniques that best fit their research. The analyses are illustrated with examples from major longitudinal data sets including practical information about their content and design. Illustrations from popular software packages offer tips on how to interpret the results. Each chapter features suggested readings for additional study and a list of articles that further illustrate how to implement the analysis and report the results. Syntax examples for several software packages for each of the chapter examples are provided at [www.psypress.com/longitudinal-data-analysis](http://www.psypress.com/longitudinal-data-analysis). Although many of the examples address health or social science questions related to aging, readers from other disciplines will find the analyses relevant to their work. In addition to demonstrating statistical analysis of longitudinal data, the book shows how to interpret and analyze the results within the context of the research design. The methods covered in this book are applicable to a range of applied problems including short to long term longitudinal studies using a range of sample sizes. The book provides non-technical, practical introductions to the concepts and issues relevant to longitudinal analysis. Topics include use of publicly available data sets, weighting and adjusting for complex sampling designs with longitudinal studies, missing data and attrition measurement issues related to longitudinal research, the use of ANOVA and regression for average change over time, mediation analysis, growth curve models, basic and advanced structural equation models, and survival analysis. An ideal supplement for graduate level courses on data analysis and/or longitudinal modeling taught in psychology, gerontology, public health, human development, family studies, medicine, sociology, social work, and other behavioral, social, and health sciences, this multidisciplinary book will also appeal to researchers in these fields.

**Using Longitudinal Structural Equation Modeling to Study the Development of Intelligence and Its Relation to Academic Achievement**, 2017

In 2013, Drs. Allen and Adele Gottfried shared the Fullerton longitudinal data with us. The data provided a unique opportunity to investigate the intellectual development and the longitudinal relation between intelligence and academic achievement. Previous studies have seldom addressed the latent nature of intelligence and academic achievement. Instead, they commonly used observed IQ scores and achievement test scores directly. Therefore, the stability of intelligence and the relation between intelligence and achievement were underestimated to some extent due to measurement error in the observed scores. Using structural equation models in which both intelligence and academic achievement were measured as latent constructs, theoretically free of measurement error, we found that intelligence was very stable from infancy to adolescence. Furthermore, the effect of intelligence at earlier stages on the current intelligence was fully mediated by the intelligence at the adjacent preceding stage. Not surprisingly, intelligence was very predictive for students' initial achievement at school. However, after controlling for the previous achievement, intelligence was not predictive of subsequent achievement. This case study guides readers through the whole process of conducting a data-driven research, from preparing data to selecting appropriate methodologies and then from interpreting significant results to reporting important findings. This case study demonstrates the potential value of

reexamining classic findings using modern analytic techniques This case study pays particular attention to making reasonable modifications to models determining the best models and interpreting the results to answer research questions
