Therapeutic Antibodies Antony S. Dimitrov, 2009-03-05 Over 2000 years ago in China antibodies elicited by early forms of vaccination likely played a major role in the protection of the population from infectious agents Vaccination has been further developed in Europe and described by Edward Jenner in the late eighteenth century then successfully implemented worldwide The idea to use the active ingredient in the blood of vaccinated or immunized animals or humans for the treatment of diseases came a century later It was made possible by a series of discoveries such as the realization that the serum from animals immunized with toxins for example diphtheria toxin or viruses is an effective therapeutic against the disease caused by the same agent in humans In the 1880s von Behring developed an antitoxin antibody that did not kill the bacteria but neutralized the bacterial toxin The first Nobel Prize in Medicine 1901 was given to him for the discovery of the serum therapy A century later 22 monoclonal antibodies mAbs are approved by the United States Food and Drug Administration FDA for clinical use and hundreds are in clinical trials for the treatment of various diseases including cancers immunedisorders and infections The revenues from the top five therapeutic antibodies reached 11.7 billion in 2006 and major pharmaceutical companies raced to acquire antibody biotech companies with a recent example of MedImmune Inc which was acquired for 15.6 billion by AstraZeneca in 2007 This explosion of research and development in the field of therapeutic antibodies prompted the publication of the MiMB volume Therapeutic Antibodies Methods and Protocols The book's major goal is to present a set of protocols useful for researchers discovering and developing therapeutic antibodies
