**Languages and Compilers for Parallel Computing** Lawrence Rauchwerger,2004-02-25 This book constitutes the thoroughly refereed post proceedings of the 16th International Workshop on Languages and Compilers for Parallel Computing LCPC 2003 held in College Station Texas USA in October 2003 The 35 revised full papers presented were selected from 48 submissions during two rounds of reviewing and improvement upon presentation at the workshop The papers are organized in topical sections on adaptive optimization data locality parallel languages high level transformations embedded systems distributed systems software low level transformations compiling for novel architectures and optimization infrastructure **Retargetable Compiler Technology for Embedded Systems**

Rainer Leupers,Peter Marwedel,2013-03-09 It is well known that embedded systems have to be implemented efficiently This requires that processors optimized for certain application domains are used in embedded systems Such an optimization requires a careful exploration of the design space including a detailed study of cost performance tradeoffs In order to avoid time consuming assembly language programming during design space exploration compilers are needed In order to analyze the effect of various software or hardware configurations on the performance retargetable compilers are needed that can generate code for numerous different potential hardware configurations This book provides a comprehensive and up to date overview of the fast developing area of retargetable compilers for embedded systems It describes a large set important tools as well as applications of retargetable compilers at different levels in the design flow Retargetable Compiler Technology for Embedded Systems is mostly self contained and requires only fundamental knowledge in software and compiler design It is intended to be a key reference for researchers and designers working on software compilers and processor optimization for embedded systems *System-on-Chip* Bashir M. Al-Hashimi,2006-01-31 This book highlights both the key achievements of electronic systems design targeting SoC implementation style and the future challenges presented by the continuing scaling of CMOS technology

Low-Power Processors and Systems on Chips Christian Pigué,2018-10-03 The power consumption of microprocessors is one of the most important challenges of high performance chips and portable devices In chapters drawn from Pigué s recently published *Low Power Electronics Design* this volume addresses the design of low power microprocessors in deep submicron technologies It provides a focused reference for specialists involved in systems on chips from low power microprocessors to DSP cores reconfigurable processors memories ad hoc networks and embedded software *Low Power Processors and Systems on Chips* is organized into three broad sections for convenient access The first section

examines the design of digital signal processors for embedded applications and techniques for reducing dynamic and static power at the electrical and system levels The second part describes several aspects of low power systems on chips including hardware and embedded software aspects efficient data storage networks on chips and applications such as routing strategies in wireless RF sensing and actuating devices The final section discusses embedded software issues including details on compilers retargetable compilers and coverification tools Providing detailed examinations contributed by leading experts Low Power Processors and Systems on Chips supplies authoritative information on how to maintain high performance while lowering power consumption in modern processors and SoCs It is a must read for anyone designing modern computers or embedded systems
