Global Air Transport Management and Reshaping Business Models for the New Era Kankaew, Kannapat, 2022-05-27 The air transport industry is highly vulnerable to environmental changes as was seen when the recent COVID 19 pandemic caused most airline operations to cease. However, for decades airlines have been collapsing around the globe as the business of managing airline operations has become stressed due to price competition. This is detrimental to air carriers since air transport products and services are the same. Moreover, it impacts other industries such as tourism, hotels, and restaurants, which contribute to the derailment of economic and social activities. Thus, it is essential to determine new practices and strategies that can allow air transport management to be enriched and to flourish. **Global Air Transport Management and Reshaping Business Models for the New Era** provides a comprehensive collection of knowledge on the new era of business management on air transport. It provides strategies, technologies, and tools used in the reshaping of the air transport business model. Covering topics such as customer experience, robotic process automation, and airline alliances, this major reference work is an essential resource for airline managers, supply chain specialists, air transport managers, students, and faculty of higher education, libraries, researchers, economists, government officials, and academicians. **Innovative Risk Leadership in Aviation** Triant Flouris, Ayşe Küçük Yılmaz, Konstantinos Malagas, 2025-08-26 This book focuses on the perspective of risk leadership strategy in view of human resources, diversity management, and inclusion projects in the multicultural business environment of aviation operations. It will enable the reader to successfully develop strategies and manage their sustainability with sound risk leadership, organisational behaviour, and ergonomic focused approaches to achieve corporate objectives within their aviation industry context. Innovative risk leadership is the essential driver in diversity, ethical, and inclusion-based global management strategies, which are affected by digitalisation and artificial intelligence (AI). This book showcases many contemporary management issues grounded in the innovative risk leadership concept and will serve as a useful resource for managers and professionals, as well as researchers of enterprise management and strategy. It examines the successful integration of innovative risk leadership into business management with diversity and inclusion shaped by AI, with an emphasis on aviation issues, recognising that aviation enterprises operate in a hypercompetitive environment, applying digital technologies to achieve smooth operations and efficient performance, and that the effective management of multiculturalism is a key priority in this global industry. Such realities result in higher risk, and as such, aviation managers must always strive to find ways to mitigate this risk. Practices and policies that the aviation industry applies to handle these issues are shown to be adopted from other sectors, as well as adapted to other sectors. Written for aviation industry managers, professionals, students, and researchers interested in risk management, the book could also be utilised as a handbook for MROs, airlines, airports, and aerospace manufacturers. **Flight Safety Management** Chi-Bin Cheng, Huan-Jyh Shyr, 2025-02-24 This book offers a comprehensive overview of using artificial intelligence and

quantitative approaches in many phases of flight safety management from proactive assessment of potential risks of flights before taking off to automatic analysis of occurred flight events for commercial airlines Flight safety is commonly the core values of airlines Serious flight disasters always bring tremendous impacts and losses to the industry and the society thus airlines and the authorities always treat the issues of flight safety management as the first priority It presents the information systems that assist the safety staff and managers to adopt preventive operations or to analyze the critical factors or operations that cause a flight event Such information systems were developed based on artificial intelligence and quantitative approaches including fuzzy logic expert systems deep learning decision making methods reliability theory and data mining After introducing the flight safety management practice and common programs as well as basic artificial intelligence and quantitative approaches the book describes in detail the information systems we have developed and provides instructions for flight safety practitioners to implement such information systems in their organizations Case studies collected from the cooperated airline are also presented
