These R D efforts include a major drive towards improving materials performance, fuel cell operation and durability. In situ characterization is essential to improving performance and extending operational lifetime through providing information necessary to understand how fuel cell materials perform under operational loads. This two volume set reviews the fundamentals, performance and in situ characterization of PEMFCs and DMFCs. Volume 1 covers the fundamental science and engineering of these low temperature fuel cells, focusing on understanding and improving performance and operation. Part one reviews systems fundamentals ranging from fuels and fuel processing to the development of membrane and catalyst materials and technology and gas diffusion media and flowfields as well as life cycle aspects and modelling approaches. Part two details performance issues relevant to fuel cell operation and durability such as catalyst ageing, materials degradation and durability testing, and goes on to review advanced transport simulation approaches, degradation modelling and experimental monitoring techniques. With its international team of expert contributors, *Polymer electrolyte membrane and direct methanol fuel cell technology* Volumes 1 2 is an invaluable reference for low temperature fuel cell designers and manufacturers as well as materials science and electrochemistry researchers and academics. Covers the fundamental science and engineering of polymer electrolyte membrane fuel cells (PEMFCs) and direct methanol fuel cells (DMFCs) focusing on understanding and improving performance and operation.
