Evolution Futuyma 3rd Edition :

Evolution Douglas Futuyma, 2013-07-15 Thoroughly updated with new content figures and citations the third edition addresses major themes in contemporary evolutionary biology including the history of evolution evolutionary processes adaptation and evolution as an explanatory framework at levels of biological organization ranging from genomes to ecological communities

Evolution Douglas J. Futuyma, Mark Kirkpatrick, 2017-10-15 Published by Sinauer Associates an imprint of Oxford University Press Extensively rewritten and reorganized this new edition of Evolution featuring a new coauthor Mark Kirkpatrick The University of Texas at Austin offers additional expertise in evolutionary genetics and genomics the fastest developing area of evolutionary biology Directed toward an undergraduate audience the text emphasizes the interplay between theory and empirical tests of hypotheses thus acquainting students with the process of science It addresses major themes including the history of evolution evolutionary processes adaptation and evolution as an explanatory framework at levels of biological organization ranging from genomes to ecological communities

Developmental Plasticity and Evolution Mary Jane West-Eberhard, 2003-03-13 The first comprehensive synthesis on development and evolution it applies to all aspects of development at all levels of organization and in all organisms taking advantage of modern findings on behavior genetics endocrinology molecular biology evolutionary theory and phylogenetics to show the connections between developmental mechanisms and evolutionary change This book solves key problems that have impeded a definitive synthesis in the past It uses new concepts and specific examples to show how to relate environmentally sensitive development to the genetic theory of adaptive evolution and to explain major patterns of change In this book development includes not only embryology and the ontogeny of morphology sometimes portrayed inadequately as governed by regulatory genes but also behavioral development and physiological adaptation where plasticity is mediated by genetically complex mechanisms like hormones and learning The book shows how the universal qualities of phenotypes modular organization and plasticity facilitate both integration and change Here you will learn why it is wrong to describe organisms as genetically programmed why environmental induction is likely to be more important in evolution than random mutation and why it is crucial to consider both selection and developmental mechanism in explanations of adaptive evolution This book satisfies the need for a truly general book on development plasticity and evolution that applies to living organisms in all of their life stages and environments Using an immense compendium of examples on many kinds of organisms from viruses and bacteria to higher plants and animals it shows how the phenotype is reorganized during evolution to produce novelties and how alternative phenotypes occupy a pivotal role as a phase of evolution that fosters diversification and speeds change The arguments of this book call for a new view of the major themes of evolutionary biology as shown in chapters on gradualism homology environmental induction speciation radiation macroevolution punctuation and the maintenance of sex No other treatment of development and evolution since Darwin's offers such a comprehensive and critical discussion of the relevant issues

Developmental Plasticity and Evolution is designed for biologists interested in the development and evolution of behavior life history patterns ecology physiology morphology and speciation It will also appeal to evolutionary paleontologists anthropologists psychologists and teachers of general biology

Evolutionary Ecology Charles W. Fox, Derek A. Roff, Daphne J. Fairbairn, 2001 This text unifies conceptual and empirical advances in evolutionary ecology and the focus is on current concepts in evolutionary ecology and the empirical study of these concepts The book is divided into five sections an overview of the major topics in evolutionary biology for ecologists sections on life histories behavior coevolution and adaptation to anthropogenic change
