High Availability Per Lo Stack Lamp Jason Cannon,2015-03-09 Uno dei modi pi comuni di rendere disponibili le applicazioni web attraverso lo stack LAMP LAMP un acronimo che sta per Linux Apache MySQL e PHP in questo ambiente Linux il sistema operativo Apache il server web MySQL il server di database e PHP il linguaggio di programmazione Questa architettura pu essere utilizzata per servire applicazioni open source o anche app personalizzate Siti web famosissimi come Facebook Wikipedia e Yahoo usano questo ambiente per servire le loro applicazioni a milioni di utenti in tutto il mondo e anche moltissime applicazioni open source quali WordPress Drupal Joomla MediaWiki e SugarCRM si appoggiano allo stack LAMP Che stiate implementando o facendo da piattaforma ad un applicazione personalizzata o che stiate usando una soluzione open source dovrete usare un architettura che massimizzi il tempo di uptime dell applicazione elimini i single point of failure permetta di scalare senza tempo di fermo e sia relativamente semplice da implementare e supportare meglio prendersi il tempo all inizio per tenere in considerazione i requisiti e gli obiettivi a lungo termine del servizio che state implementando invece di prendere decisioni sull architettura durante un momento di emergenza come pu essere un

potenziale aumento del traffico o un interruzione dell'elettricità. Fare queste cose durante un'emergenza non è il modo migliore di gestirle. Ogni progetto può avere requisiti diversi ma in genere ci sono solo alcuni punti importanti da considerare di sicuro: la ridondanza, la scalabilità, le prestazioni e la gestione. La ridondanza, come si riesce a reagire ad eventuali guasti, la scalabilità, la possibilità di gestire una base di utenti più grande o più piccola, le prestazioni implicano assicurarsi che l'esperienza di ciascun utente sia ad un livello almeno accettabile. Avere un servizio ridondante, scalabile e ad alte prestazioni non serve a niente se non si riesce a gestirlo.
