**Channel Codes** William Ryan, Shu Lin, 2009-09-17 Channel coding lies at the heart of digital communication and data storage and this detailed introduction describes the core theory as well as decoding algorithms implementation details and performance analyses In this book Professors Ryan and Lin provide clear information on modern channel codes including turbo and low density parity check LDPC codes They also present detailed coverage of BCH codes Reed Solomon codes convolutional codes finite geometry codes and product codes providing a one stop resource for both classical and modern coding techniques Assuming no prior knowledge in the field of channel coding the opening chapters begin with basic theory to introduce newcomers to the subject Later chapters then extend to advanced topics such as code ensemble performance analyses and algebraic code design 250 varied and stimulating end of chapter problems are also included to test and enhance learning making this an essential resource for students and practitioners alike

OFDM Wireless LANs John Terry, Juha Heiskala, 2002 Annotation Deploy and optimize your wireless LAN using the new standard for broadband wireless communication OFDM A comprehensive reference written by two experts who helped create the OFDM specifications A detailed practical guide to OFDM WLANs does not exist requiring readers to seek out multiple sources of information such as white papers and research notes Detailed explanations of the concepts and algorithms behind OFDM context that is missing from the two OFDM books currently available This book explains OFDM WLAN basics including components of OFDM and multicarrier WLAN standards It provides a practical approach to OFDM by including software and hardware examples and detailed implementation explanations OFDM Multicarrier Wireless Networks A Practical Approach defines and explains the mathematical concepts behind OFDM necessary for successful OFDM WLAN implementations Juha Heiskala is a research engineer at Nokia Research Center in Irving TX Heiskala is active in the IEEE 802 11 standards bodies and has been tasked with developing the 802 11a system simulation on several software platforms He is the inventor co inventor of three pending patents in the area of OFDM LANs and co designed with Dr John Terry the modulation and coding scheme for achieving 100 Mbps speeds within currently allocated band specifications for OFDM WLANs John Terry Ph D is a senior research engineer at Nokia Research Center He is currently managing the OFDM modulation and coding project in the HSA group Dr Terry has published several white papers given numerous presentations on wireless communications and

generated four patents related to OFDM WLANs He has 10 years of experience working in wireless communications including tenures at NASA Glen Research Center and Texas Instruments

Coding Theory Andre Neubauer, Jurgen Freudenberger, Volker Kuhn, 2007-10-22 One of the most important key technologies for digital communication systems as well as storage media is coding theory It provides a means to transmit information across time and space over noisy and unreliable communication channels Coding Theory Algorithms Architectures and Applications provides a concise overview of channel coding theory and practice as well as the accompanying signal processing architectures The book is unique in presenting algorithms architectures and applications of coding theory in a unified framework It covers the basics of coding theory before moving on to discuss algebraic linear block and cyclic codes turbo codes and low density parity check codes and space time codes Coding Theory provides algorithms and architectures used for implementing coding and decoding strategies as well as coding schemes used in practice especially in communication systems Feature of the book include Unique presentation like style for summarising main aspects Practical issues for implementation of coding techniques Sound theoretical approach to practical relevant coding methodologies Covers standard coding schemes such as block and convolutional codes coding schemes such as Turbo and LDPC codes and space time codes currently in research all covered in a common framework with respect to their applications This book is ideal for postgraduate and undergraduate students of communication and information engineering as well as computer science students It will also be of use to engineers working in the industry who want to know more about the theoretical basics of coding theory and their application in currently relevant communication systems

Trellises and Trellis-Based Decoding Algorithms for Linear Block Codes Shu Lin, Tadao Kasami, Toru Fujiwara, Marc Fossorier, 2012-12-06 As the demand for data reliability increases coding for error control becomes increasingly important in data transmission systems and has become an integral part of almost all data communication system designs In recent years various trellis based soft decoding algorithms for linear block codes have been devised New ideas developed in the study of trellis structure of block codes can be used for improving decoding and analyzing the trellis complexity of convolutional codes These recent developments provide practicing communication engineers with more choices when designing error control systems Trellises and Trellis based Decoding Algorithms for Linear Block Codes combines trellises and trellis based decoding algorithms for linear codes together in a simple and unified form The approach is to explain the material in an easily understood manner with minimal mathematical rigor Trellises and Trellis based Decoding Algorithms for Linear Block Codes is intended for practicing communication engineers who want to have a fast grasp and understanding of the subject Only material considered essential and useful for practical applications is included This book can also be used as a text for
