

Biology EOC Study Guide 2012/2013

1.1 Cells and Organelles

1.1.1 - Cells organelles

- Nucleus: contains DNA (instructions)
- Plasma membrane: is very flexible and made of phospholipids; controls what goes in and out of the cell.
- Cell wall: found outside of the membrane in plant cells (bacteria and fungi too); forms a rigid, outer protection for the cell
- Mitochondria: creates energy; RESPIRATION occurs here= produces ATP (energy)
**Remember that the mitochondria have folds on the inside that increase the amount of space available for energy production!*
- Vacuoles: sites of temporary storage; plants have a large one
- Chloroplasts: found in green plants and algae; where PHOTOSYNTHESIS occurs
- Ribosomes: site of protein production

**ALL organelles work together to perform the many functions of a cell! For example: DNA codes for protein that are assembled by ribosomes and used as enzymes for energy production at the mitochondria!!*

1.1.2 - Microscope (prokaryote/eukaryote)

- When using a microscope, always start on low power. It gives you the largest view and allows you better find and focus on what you need. To determine total magnification, multiply the eyepiece x the objective. A compound light microscope is able to magnify an object up to about 1000X. An electron microscope can magnify up to 2 million times!

Chapter 2 The Biology Of Mind Study Guide Answers

Siddappa N.Byrareddy

Chapter 2 The Biology Of Mind Study Guide Answers:

Getting the books **Chapter 2 The Biology Of Mind Study Guide Answers** now is not type of challenging means. You could not by yourself going following book accretion or library or borrowing from your associates to log on them. This is an completely easy means to specifically acquire lead by on-line.
