century in an accessible way It analyses the history of anatomic pathology clinical practice experimentation different life systems transformism and the role of images and classifications This conceptual study of the history of life sciences thus redefines the links between medicine and biology in a period when the exploration and understanding of the body oscillated between different models ranging from mechanism to vitalism The analyses presented invite reflection on the singularity of ancient concepts such as life anatomy and experience whose definitions are renewed according to techniques and experiments

Outlines of Ancient History William Carey Morey,1906 AEB ,1989 *History of Life Sciences and Medicine, Volume 3* Jean-Claude Dupont,2026-03-10 Writing the recent history of life sciences is an exciting but demanding undertaking Some disciplines are emerging while others are disappearing above all they are now intertwined and overlapping constantly shifting their boundaries However despite the resulting complexity certain fundamental cross disciplinary concepts continue to structure research giving biology a coherent overall identity History of Life Sciences and Medicine 3 takes a conceptual approach to history aiming to reflect the contemporary constitution of the field of life sciences It thus addresses some of the most representative concepts from a historical and epistemological perspective for example those that have particularly structured the field of life sciences since the 19th and 20th centuries Ten key biological concepts are analyzed the origin of life evolution the ecosystem the cell metabolism the gene development immunity the brain and pathology
