

EXPERIMENTS SECTION – A

Experiment No. 1(a)

To measure diameter of a small spherical body using vernier callipers and hence calculate its volume.

Apparatus :

Vernier callipers, a spherical body.

Theory :

Small distances are measured using vernier callipers. Smallest distance which can be measured using vernier is the difference between main scale division (MSD) and vernier scale division (VSD) as shown in fig. 1(a).2. This smallest distance is called vernier constant or least count. Main scale division is generally 1 mm and vernier scale division is a little lesser, therefore, difference of the two is quite less.

Volume of a sphere is given by relation $\frac{4}{3}\pi R^3$ where R is radius of the sphere.

Fig. 1(a).1. Vernier Callipers

Least Count or Vernier Constant

On enlarged scale

← Main Scale Divisions (1 MSD = 1 mm)

← Vernier Scale Divisions (1 VSD)

Fig. 1(a).2. Vernier constant.

Procedure :

1. Find vernier constant of vernier callipers.
2. Slide movable jaw B towards the fixed jaw A, so that these are in contact with each other. Read the vernier division which coincides with a main scale division. Calculate zero error.
3. Open the jaws, place the sphere between the two jaws, press the jaws such that the jaws hold the sphere.
4. Read the main scale at zero mark of vernier scale. Also read the vernier scale coinciding with any division on the main scale.
5. Open the jaws, rotate the sphere a little and press the jaws so that they hold the sphere. Repeat step 4.
6. Repeat steps 4 and 5 a number of times. Take a total of six readings.
