see the frontier of modern physical chemistry developments The book begins with a discussion of wave particle duality and
proceeds systematically to more complex chemical systems in order to relate the story of physical chemistry in an
intellectually coherent manner The topics are organized to correspond with those typically given in each of a two course
semester sequence The first 13 chapters present quantum mechanics and spectroscopy to describe and predict the structure
of matter atoms molecules and solids Chapters 14 to 29 present statistical thermodynamics and kinetics and applies their
principles to understanding equilibria chemical transformations macromolecular properties and supramolecular machines
Each chapter of the book begins with a simplified view of a topic and evolves to more rigorous description in order to provide
the student and instructor flexibility to choose the level of rigor and detail that suits them best The textbook treats important
new directions in physical chemistry research including chapters on macromolecules principles of interfaces and films for
organizing matter and supramolecular machines as well as including discussions of modern nanoscience spectroscopy and
reaction dynamics throughout the text **Journal of Heat Transfer** ,1971 Publishes research on energy transfer in
