An Atmospheric Science

THIRD EDITION

HIDORE | OLIVER | SNOW | SNOW

For many years, Antarctica appeared to be unaffected by global warming. However, temperature measurements from satellites and ground weather stations recently revealed that Antarctica has warmed at a rate of about  $0.12^{\circ}\text{C}$  ( $0.22^{\circ}\text{F}$ ) per decade since 1957, for a total average warming of  $0.5^{\circ}\text{C}$  ( $1.0^{\circ}\text{F}$ ). The image on the front cover represents this warming trend between 1957 and 2008. The darker shades of red show that the greatest warming occurred over West Antarctica. The orange color shows a smaller warmer trend, whereas the areas in white indicate no change.

*Climatology: An Atmospheric Science* explores the broad impacts of weather and climate, including a section on applied climatology that shows students how climate influences daily life. The third edition features a new section on climate change, which includes chapters on natural causes of climate change, reconstruction of past climates, greenhouse gases and global warming, and the effects of climate change on the physical environment and living world.
