## **Controlling Design Variants Modular Product Platforms Hardcover:**

**Controlling Design Variants** Anna Ericsson, Gunnar Ericson, 1999 Introduces the concept of modular design within the product platform approach intended to increase company efficiency while reducing costs and time to market Companies can achieve significant advantages by separating parts that should vary to satisfy customer needs from parts that should be kept as common units The terminology and a five step method for creating modular product platforms are developed Back cover

### **Technical Digest**, 1999 Cooperative Decision-Making in Modular Product Family Design Marc

Windheim, 2019-11-21 The development of modular product families holds enormous economic potential for companies as there are always great opportunities but also risks associated with all life phases of a product However these fundamental and far reaching effects inevitably lead to conflicting objectives when defining modular product structures which makes decision making in product development particularly complex Considering relevant theories from decision theory and product family design this book presents an innovative method to support decision makers in the development of modular product families The central element of the method is a novel Modularity Decision Dashboard MDD which interactively visualizes all decision relevant data The findings presented here confirm that applying the method to real world decision making problems leads to a more balanced ratio between internal and external variety and thus significantly contributes to the efficient economic benefit of modularization **Modular Product Platform Design** Katja Hölttä-Otto, 2005

**Methodical Development of Modular Product Families** Dieter Krause, Nicolas Gebhardt, 2023-02-01 This book focuses on the development of multi variant products using modular product structures and thus addresses the reduction of complexity from a product development perspective These modular product structures allow for a greater variety of demand with a smaller internal variety of components and processes As a supplement to the common product development methodology the necessary basics of modularity and variant diversity as well as the corresponding methods are presented comprehensively The book thus summarizes the current state of science as well as the research activities of the past ten years at the Institute of Product Development and Design Technology at the TU Hamburg Harburg The target groups This book is aimed at product developers and decision makers in practice Science is offered a helpful reference book and interested engineering students can immerse themselves in the development of modular product families with the necessary basics This book is a translation of the original German 1st edition Methodische Entwicklung modularer Produktfamilien by Dieter Krause Nicolas Gebhardt published by Springer Fachmedien Wiesbaden GmbH part of Springer Nature in 2018 The translation was done with the help of artificial intelligence machine translation by the service DeepL.com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors **Design for Changeability: Incorporating Change Propagation Analysis**

Development for Mass Customization Ahm Shamsuzzoha, 2010-09 Product customization is a growing concern in today's competitive business environment. A customer-driven product design and development system must be developed to respond to customers' aspirations and demands. Success in the customization process is achieved by swiftly reconfiguring product development processes and business strategies with respect to individual customers' needs and dynamic production requirements. Product reconfiguration approaches allow satisfying unexpected customer demands through offering extra features. It permits customers to choose their products based on choices of product attributes. Along with the product reconfiguration process, a new level of information integration among product development participants is required both within the firm and with external environments. In this book, the integration of information systems among potential customers, designers, and manufacturers is developed with a view to fabricate custom-built products. This integration process also needs to be formulated with appropriate production strategies such as modularity, platform-based product development, commonality, etc. to meet diverse market demands.

### **An Inductive Approach to Product Design Based on Modular Product**

**Architecture** Balaji Chandrasekaran, 2001 *Multiobjective Optimization Method for Identifying Modular Product Platforms and Modules that Account for Changing Needs Over Time* Patrick K. Lewis, 2010 Natural and predictable changes in consumer needs often require the development of new products. Providing solutions that anticipate, account for, and allow for these changes over time is a significant challenge to manufacturers and design engineers. Products that adapt to these changes through the addition of modules reduce production costs through product commonality and provide a set of products that cater to customization and adaptation. In this thesis, a multiobjective optimization design method using Pareto frontiers sets of non-dominated designs from disparate design models is developed and used to identify a set of optimal adaptive product designs that satisfy changing consumer needs. The novel intent of the method is to design a product that adapts to changing consumer needs by moving from one location on the Pareto frontier to another through the addition of a module and/or reconfiguration. The six-step method is described as follows: A Characterize the multiobjective design space; B Identify the anticipated regions of interest within the search space based on predicted future needs; C Identify the platform design variables that minimize the performance losses due to commonality across the anticipated regions of interest; D Assemble the Pareto frontier within each region of interest; E Determine the values of all design variables for the optimal product design in each region of interest by multiobjective optimization; F Identify the module design variables and identify the platform and module designs by constrained module design. An example of the design of a simple unmanned air vehicle is used to demonstrate application of the method for a single Pareto frontier case. The design of a manual irrigation pump is used to demonstrate application of the method for a Pareto frontier case. In addition, these examples show the ability of the method to design a product that adapts to changing consumer needs by traversing the Pareto frontier.
