Corrosion and Electrochemistry of Zinc Xiaoge Gregory Zhang, 2013-06-29 Humankind's use of zinc stretches back to antiquity and it was a component in some of the earliest known alloy systems. Even though metallic zinc was not discovered in Europe until 1746 by Marggrat, zinc ores were used for making brass in biblical times and an 87% zinc alloy was found in prehistoric ruins in Transylvania. Also, zinc the metal was produced in quantity in India as far back as the thirteenth century well before it was recognized as being a separate element. The uses of zinc are manifold ranging from galvanizing to die castings to electronics. It is a preferred anode material in high energy density batteries e.g. Ni-Zn, Ag-Zn, Zn-Air so that its electrochemistry particularly in alkaline media has been extensively explored. In the passive state zinc is photoelectrochemically active with the passive film displaying n-type characteristics. For the same reason that zinc is considered to be an excellent battery anode it has found extensive use as a sacrificial anode for the protection of ships and pipelines from corrosion. Indeed, aside from zinc's well known attributes as an alloying element its widespread use is principally due to its electrochemical properties which include a well placed position in the galvanic series for protecting iron and steel in natural aqueous environments and its reversible dissolution behavior in alkaline solutions.

Nanostructured Anodic Metal Oxides Grzegorz D. Sulka, 2020-03-30 Nanostructured Anodic Metal Oxides: Synthesis and Applications reviews the current status of fabrication strategies that have been successfully developed to generate nanoporous, nanotubular and nanofibrous anodic oxides on a range of metals. The most recent achievements and innovative strategies for the synthesis of nanoporous aluminum oxide and nanotubular titanium oxide are discussed. However, a special emphasis is placed on the possibility of fabrication of nanostructured oxide layers with different morphologies on other metals including aluminum, titanium, tantalum, tin, zinc, zirconium and copper. In addition, emerging biomedical applications of synthesized materials are discussed in detail. During the past decade, great progress has been made both in the preparation and characterization of various nanomaterials and their functional applications. The anodization of metals has proven to be reliable for the synthesis of nanoporous, nanotubular and nanofibrous metal oxides to produce a desired diameter, density, aspect ratio, length to diameter of pores, tubes and internal pore tube structure.

Fundamentals of Thermal Spraying Ariharan S, Rubia Hassan, Alok Bhadauria, Ashutosh Tiwari, Ritik Tandon, Anup Kumar Keshri, Kantesh Balani, 2022-11-30 This book discusses the concepts and uses of thermal spraying including starting powder, spraying parameters, diagnostics, coating deposition, evolved microstructure and resulting properties, complemented with several case studies to associate the learnings with applied concepts.
