Engineering And The Minds Eye:

Engineering and the Mind's Eye Eugene S. Ferguson,1994-03-29 In this insightful and incisive essay Eugene Ferguson demonstrates that good engineering is as much a matter of intuition and nonverbal thinking as of equations and computation He argues that a system of engineering education that ignores nonverbal thinking will produce engineers who are dangerously ignorant of the many ways in which the real world differs from the mathematical models constructed in academic minds

Engineering and the Mind's Eye Eugene S. Ferguson,1992 In *Engineering and the Mind's Eye* Ferguson discusses the nature of engineering design and traces the development of visual and other nonverbal thinking offering examples of how engineers and other technologists have used such strategies since the Renaissance Accompanying these examples and demonstrating the ways in which engineers have shared their knowledge is a parallel text of illustrations showing how visual thinking has been expressed over the past five centuries Ferguson concludes his provocative account by arguing that engineering education since 1945 has been skewed toward analytical techniques which are easiest to teach and evaluate and away from the art of engineering design as taught by experienced engineers

Engineering Practice in a Global Context Bill Williams, José Figueiredo, James Trevelyan,2013-09-03 This volume aims to provide the reader with a broad cross section of empirical research being carried out into engineers at work The chapters provide pointers to other relevant studies over recent decades an important aspect we believe because this area has only recently begun to coalesce as a field of study and up to now relevant empirical research has tended to be published across a range of academic disciplines This lack of readily available literature might explain why contemporary notions of engineering have drifted far from the realities of practice and are in urgent need of revision The principal focus is on what empirical studies tell us about the social and technical aspects of engineering practice and the mutual interaction between the two After a foreword by Gary Lee Downey the research presented by the various chapter authors is based on empirical data from studies of engineers working in a variety of global settings that include Australia Ireland Portugal South Asia Switzerland the UK and the US The following groups of readers are addressed researchers and students with an interest in engineering practice professional engineers particularly those interested in research on engineering practice engineering educators people who employ recruit or work with engineers Providing a much clearer picture of engineering practice and its variations than has been available until now the book is of interest to engineers and those who work with them At the same time it

provides invaluable resource material for educators who are aiming for more authentic learning experiences in their classrooms Further information visit the website Engineering Practice in a Global Context Online <http://epr.ist.utl.pt/EPGC>
