Chapter 1

Problems 1-1 through 1-6 are for student research. No standard solutions are provided.

1-7 From Fig. 1-2, cost of grinding to ± 0.0005 in is 270%. Cost of turning to ± 0.003 in is 60%.

$$\text{Relative cost of grinding vs. turning} = 270/60 = 4.5 \text{ times} \quad \text{Ans.}$$

1-8 $C_A = C_B$

$$10 + 0.8 P = 60 + 0.8 P - 0.005 P^2$$

$$P^2 = 50/0.005 \quad \Rightarrow \quad P = 100 \text{ parts} \quad \text{Ans.}$$

1-9 Max. load = 1.10 P

Min. area = $(0.95)^2 A$

Min. strength = 0.85 S

To offset the absolute uncertainties, the design factor, from Eq. (1-1) should be

$$n_d = \frac{1.10}{0.85(0.95)^2} = 1.43 \quad \text{Ans.}$$

1-10 (a) $X_1 + X_2$:

$$x_1 + x_2 = X_1 + e_1 + X_2 + e_2$$

$$\text{error} = e = (x_1 + x_2) - (X_1 + X_2)$$

$$= e_1 + e_2 \quad \text{Ans.}$$

(b) $X_1 - X_2$:

$$x_1 - x_2 = X_1 + e_1 - (X_2 + e_2)$$

$$e = (x_1 - x_2) - (X_1 - X_2) = e_1 - e_2 \quad \text{Ans.}$$

(c) $X_1 X_2$:

$$x_1 x_2 = (X_1 + e_1)(X_2 + e_2)$$

$$\begin{aligned} e &= x_1 x_2 - X_1 X_2 = X_1 e_2 + X_2 e_1 + e_1 e_2 \\ &\approx \underset{1,2}{X} \underset{2,1}{e} + \underset{1,2}{X} \underset{2,1}{e} = \underset{1}{X} \underset{2}{X} \left(\frac{e_1}{\underset{1}{X_1}} + \frac{e_2}{\underset{2}{X_2}} \right) \quad \text{Ans.} \end{aligned}$$

Nevertheless, advanced composites are expected to play an even greater role in future military systems and DOD will continue to require access to reliable sources of affordable high performance fibers, including commercial materials and manufacturing processes. As a result of these forecasts, DOD requested the NRC to assess the challenges and opportunities associated with advanced PMCs, with emphasis on high performance fibers. This report provides an assessment of fiber technology and industries, a discussion of R D opportunities for DOD, and recommendations about accelerating technology transition, reducing costs, and improving understanding of design methodology and promising technologies. primarily for first time SolidWorks Simulation 2011 users who wish to understand finite element analysis capabilities applicable to stress analysis of mechanical elements The focus of examples is on problems commonly found in an introductory undergraduate Design of Machine Elements or similarly named courses In order to be compatible with most machine design textbooks this text begins with problems that can be solved with a basic understanding of mechanics of materials Problem types quickly migrate to include states of stress found in more specialized situations common to a design of mechanical elements course Paralleling this progression of problem types each chapter introduces new software concepts and capabilities Many examples are accompanied by problem solutions based on use of classical equations for stress determination Unlike many step by step user guides that only list a succession of steps which if followed correctly lead to successful solution of a problem this text attempts to provide insight into why each step is performed This approach amplifies two fundamental tenets of this text The first is that a better understanding of course topics related to stress determination is realized when classical methods and finite element solutions are considered together The second tenet is that finite element solutions should always be verified by checking whether by classical stress equations or experimentation Each chapter begins with a list of Learning Objectives related to specific capabilities of the SolidWorks Simulation program introduced in that chapter Most software capabilities are repeated in subsequent examples so that users gain familiarity with their purpose and are capable of using them in future problems All end of chapter problems are accompanied by evaluation check sheets to facilitate grading assignments

and Engineered Slopes Experience Theory and Practice contains the invited lectures and all papers presented at the 12th International Symposium on Landslides Naples Italy 12-19 June 2016. The book aims to emphasize the relationship between landslides and other natural hazards. Hence three of the main sessions focus on Volcanic induced landslides, Earthquake induced landslides, and Weather induced landslides respectively, while the fourth main session deals with Human induced landslides. Some papers presented in a special session devoted to Subaerial and submarine landslide processes and hazard, and in a Young Session, complete the book. Landslides and Engineered Slopes Experience Theory and Practice underlines the importance of the classic approach of modern science which moves from experience to theory as the basic instrument to study landslides. Experience is the key to understand the natural phenomena, focusing on all the factors that play a major role. Theory is the instrument to manage the data provided by experience, following a mathematical approach; this allows not only to clarify the nature and the deep causes of phenomena, but mostly to predict future and, if required, manage similar events. Practical benefits from the results of theory to protect people and man-made works. Landslides and Engineered Slopes Experience Theory and Practice is useful to scientists and practitioners working in the areas of rock and soil mechanics, geotechnical engineering, engineering geology, and geology.
