Randall W. Whitesides, P.E.

Course Overview

Students of this one-hour course will be provided with two simple methods to arrive at approximate equipment costs during preliminary estimate preparation.

Learning Objective

At the conclusion of this course the student will:

- Understand the applicability of ratio and proportion estimating methods;
- Learn the technique to factor costs to correspond to varying equipment sizes and capacities;
- Learn the technique to escalate or otherwise adjust historical costs.

Intended Audience

This course is intended for anyone involved with cost estimate generation.

Benefits for Attendees

This course will provide new methods of estimating for some and refresher information for others. The course material can be used as a reference source for actual future situations.

The course includes a true-false test at the end.

Introduction

This course provides the student with an understanding of the estimating technique known as *The Rule of Six-tenths* and when appropriate, use of this rule in combination with cost indices. The various types of estimates are discussed as prerequisite background. Equations are provided to enable the student to escalate or otherwise adjust historical equipment cost data.

Content

Cost Estimate Types and Accuracy

Regardless of accuracy, capital cost estimates are typically made-up of direct and indirect costs. Indirect costs consist of project services, such as overhead and profit, and engineering and administrative fees. Direct costs are construction items for the project and include property, equipment, and materials. This course deals with the equipment component of direct cost.

Microfoundations of Evolutionary Economics Yoshinori Shiozawa,Masashi Morioka,Kazuhisa Taniguchi,2019-06-27 This book provides for the first time the microfoundations of evolutionary economics enabling the reader to grasp a new framework for economic analysis that is compatible with evolutionary processes Any independent approach to economics must include a value theory or price theory and price and quantity adjustment processes Evolutionary economics has rightly and successfully concentrated its efforts on explaining evolutionary processes in technology and institutions However it does not have its own value theory and is not capable of explaining the workings of everyday economics processes in which any evolutionary process would take place Our point of departure is the addition of myopic agents with severely limited rational and forecasting capacities in stark contrast to mainstream economics We show how myopic agents in a complex world can produce a stable price system and demonstrate how they can adjust their production to changing demand flows Agents behave without any knowledge of the overall process and they generate a stable economy as large as the global network of exchanges This is the true miracle of the market mechanism In contrast to mainstream general equilibrium theory this miracle can be explained without the need for an auctioneer or infinitely rational agents Thanks to this book evolutionary economics can now claim to be an independent approach to economics that can completely replace mainstream neoclassical economics **Equipment Selection: Heat Exchangers, Pumps, Distillation Equipment** ,1960 **Data & Methods**
