*Modeling of Combustion Systems* Joseph Colannino, 2025-02-20 *Modeling of Combustion Systems* provides accessible instruction for the operator or engineer to model combustion responses such as NO<sub>x</sub> CO flame dimensions or heat flux as a function of input factors such as excess oxygen firing rate furnace temperature and fuel type Retaining the emphasis on practical semiempirical modeling of boilers process heaters and reactors such as ethylene cracking units and ammonia and hydrogen reformers the second edition expands the approach to include combustion air fans and representation of complex models direct numerical simulations or computational fluid dynamics in concise forms It also shows how to design experiments to collect the most data with the fewest experiments and model real unit behavior with engineering accuracy This book is intended for technicians operators and engineers working with fired equipment such as boilers reactors and process heaters It includes 65 fully worked examples in MS Excel with detailed instructions All example spreadsheets are available for download from the publisher s website

**Introductory Mathematics and Statistics for Islamic Finance, + Website** Abbas Mirakhor, Noureddine Krichene, 2014-08-11 A unique primer on quantitative methods as applied to Islamic finance *Introductory Mathematics and Statistics for Islamic Finance Website* is a comprehensive guide to quantitative methods specifically as applied within the realm of Islamic finance With applications based on research the book provides readers with the working knowledge of math and statistics required to understand Islamic finance theory and practice The numerous worked examples give students with various backgrounds a uniform set of common tools for studying Islamic finance The in depth study of finance requires a strong foundation in quantitative methods Without a good grasp of math probability and statistics published theoretical and applied works in Islamic finance remain out of reach Unlike a typical math text this book guides students through only the methods that directly apply to Islamic finance without wasting time on irrelevant techniques Each chapter contains a detailed explanation of the topic at hand followed by an example based on real situations encountered in Islamic finance Topics include Algebra and matrices Calculus and differential equations Probability theory Statistics Written by leading experts on the subject the book serves as a useful primer on the analysis methods and techniques students will encounter in published research as well as day to day operations in finance Anyone aspiring to be successful in Islamic finance needs these skills and *Introductory Mathematics and Statistics for Islamic Finance Website* is a clear concise and highly relevant guide

**Financial Modeling, fifth edition** Simon Benninga, Tal Mofkadi, 2022-02-08 A substantially updated new edition of the essential text on financial modeling with revised material new data and implementations shown in Excel R and Python *Financial Modeling* has become the gold standard text in its field an essential guide for students researchers and practitioners that provides the computational tools needed for modeling finance fundamentals This fifth edition has been substantially updated but maintains the straightforward hands on approach with an optimal mix of explanation and implementation that made the previous editions so popular Using detailed Excel spreadsheets

it explains basic and advanced models in the areas of corporate finance portfolio management options and bonds This new edition offers revised material on valuation second order and third order Greeks for options value at risk VaR Monte Carlo methods and implementation in R The examples and implementation use up to date and relevant data Parts I to V cover corporate finance topics bond and yield curve models portfolio theory options and derivatives and Monte Carlo methods and their implementation in finance Parts VI and VII treat technical topics with part VI covering Excel and R issues and part VII now on the book s auxiliary website covering Excel s programming language Visual Basic for Applications VBA and Python implementations Knowledge of technical chapters on VBA and R is not necessary for understanding the material in the first five parts The book is suitable for use in advanced finance classes that emphasize the need to combine modeling skills with a deeper knowledge of the underlying financial models

**Market Risk Analysis, Quantitative Methods in Finance** Carol Alexander,2008-04-30 Written by leading market risk academic Professor Carol Alexander Quantitative Methods in Finance forms part one of the Market Risk Analysis four volume set Starting from the basics this book helps readers to take the first step towards becoming a properly qualified financial risk manager and asset manager roles that are currently in huge demand Accessible to intelligent readers with a moderate understanding of mathematics at high school level or to anyone with a university degree in mathematics physics or engineering no prior knowledge of finance is necessary Instead the emphasis is on understanding ideas rather than on mathematical rigour meaning that this book offers a fast track introduction to financial analysis for readers with some quantitative background highlighting those areas of mathematics that are particularly relevant to solving problems in financial risk management and asset management Unique to this book is a focus on both continuous and discrete time finance so that Quantitative Methods in Finance is not only about the application of mathematics to finance it also explains in very pedagogical terms how the continuous time and discrete time finance disciplines meet providing a comprehensive highly accessible guide which will provide readers with the tools to start applying their knowledge immediately All together the Market Risk Analysis four volume set illustrates virtually every concept or formula with a practical numerical example or a longer empirical case study Across all four volumes there are approximately 300 numerical and empirical examples 400 graphs and figures and 30 case studies many of which are contained in interactive Excel spreadsheets available from the accompanying CD ROM Empirical examples and case studies specific to this volume include Principal component analysis of European equity indices Calibration of Student t distribution by maximum likelihood Orthogonal regression and estimation of equity factor models Simulations of geometric Brownian motion and of correlated Student t variables Pricing European and American options with binomial trees and European options with the Black Scholes Merton formula Cubic spline fitting of yields curves and implied volatilities Solution of Markowitz problem with no short sales and other constraints Calculation of risk adjusted performance metrics including generalised Sharpe ratio omega and kappa indices

**Market Risk Analysis, Boxset** Carol Alexander,2009-02-24 Market

Risk Analysis is the most comprehensive rigorous and detailed resource available on market risk analysis. Written as a series of four interlinked volumes, each title is self-contained, although numerous cross-references to other volumes enable readers to obtain further background knowledge and information about financial applications. Volume I: Quantitative Methods in Finance covers the essential mathematical and financial background for subsequent volumes. Although many readers will already be familiar with this material, few competing texts contain such a complete and pedagogical exposition of all the basic quantitative concepts required for market risk analysis. There are six comprehensive chapters covering all the calculus, linear algebra, probability, and statistics, numerical methods, and portfolio mathematics that are necessary for market risk analysis. This is an ideal background text for a Masters course in finance. Volume II: Practical Financial Econometrics provides a detailed understanding of financial econometrics with applications to asset pricing and fund management, as well as to market risk analysis. It covers equity factor models, including a detailed analysis of the Barra model and tracking error, principal component analysis, volatility, and correlation, GARCH, cointegration, copulas, Markov switching, quantile regression, discrete choice models, non-linear regression, forecasting, and model evaluation. Volume III: Pricing, Hedging, and Trading Financial Instruments has five very long chapters on the pricing, hedging, and trading of bonds and swaps, futures, and forwards, options, and volatility, as well as detailed descriptions of mapping portfolios of these financial instruments to their risk factors. There are numerous examples, all coded in interactive Excel spreadsheets, including many pricing formulae for exotic options, but excluding the calibration of stochastic volatility models, for which Matlab code is provided. The chapters on options and volatility together constitute 50% of the book, the slightly longer chapter on volatility concentrating on the dynamic properties, the two volatility surfaces, the implied and the local volatility surfaces that accompany an option pricing model, with particular reference to hedging. Volume IV: Value at Risk Models builds on the three previous volumes to provide by far the most comprehensive and detailed treatment of market VaR models that is currently available in any textbook. The exposition starts at an elementary level, but as in all the other volumes, the pedagogical approach, accompanied by numerous interactive Excel spreadsheets, allows readers to experience the application of parametric, linear, historical simulation, and Monte Carlo VaR models to increasingly complex portfolios. Starting with simple positions, after a few chapters, we apply value at risk models to interest rate sensitive portfolios, large international securities portfolios, commodity futures, path dependent options, and much else. This rigorous treatment includes many new results and applications to regulatory and economic capital allocation, measurement of VaR model risk, and stress testing.

Introduction to the Practice of Statistics Excel Manual with Macros Linda Getch Dawson,David S. Moore,George P. McCabe,2005-03-04 An easy to use software package with excellent graphical capabilities Excel is an ideal way to teach and learn statistics at the introductory level By organizing data into spreadsheets Excel allows for easy analysis and graphic exploration Its versatility convenience and reliability make it an attractive alternative to specialized statistical software This manual was written specifically for using Excel with David Moore and George McCabe s Introduction to the Practice of Statistics Fifth Edition IPS a text that advocates using statistical software to free students from computations allowing them to focus on the more practical matters of data gathering and analysis No prior knowledge of the software is necessary The manual provides a detailed introduction to Excel in the context of IPS and follows the text chapter by chapter to show how to use Excel to work through specific examples and exercises In addition the author developed add in macros to assist in creating boxplots and normal quantile plots a capability that does not exist in standard Excel The macros are available on the textbook companion Web sit and can be downloaded and used on your own computer This manual is compatible with Excel 2000 Windows and Excel 2001 Macintosh and the code successfully operates under all subsequent versions of the software It is also easily adaptable for students using eXcel 97 Windows or Excel 98 Macintosh Back cover

**Basic Computational Techniques for Data Analysis** D Narayana,Sharad Ranjan,Nupur Tyagi,2023-06-20 This book is designed to equip students to navigate through MS Excel and basic data computation methods which are essential tools in research or professional settings and in classrooms It illustrates the concepts used in research and data analysis and economic and financial decision making in business and in daily life The book will help students acquire knowledge and develop skills in statistical techniques and financial analysis using MS Excel With illustrations and examples it will help the readers to Visualize present and analyze data through MS Excel spreadsheets and tables and create personal or business spreadsheets Learn how to work with spreadsheets use formulae and perform calculations and analysis Create tables

including Pivot Tables Become familiar with basic statistical and financial measures Design creative spread sheets and communicate effectively in business using spreadsheets and data analysis This revised and updated second edition will be an essential resource for students of economics commerce management and other social science subjects and will be useful to those studying econometrics financial technology basic computational techniques data analysis and applied economics

**Content** The book intends to illustrate the concepts used in economic and financial decision making in business and in daily life it helps demonstrate a deeper understanding from both theoretical and practical perspectives An effort has been made to make the book student friendly by using simple language and giving a number of illustrations in each chapter solved in such a simple manner that they can be easily understood by the students Practical questions have been included at the end of each chapter so that the students can independently solve them and test their understanding of the concepts and computations introduced in the chapter

**Outcome** At the end students will be able to describe what a spreadsheet is and what Excel s capabilities are and can work with elements that make up the structure of a worksheet They will be able to work with spreadsheets and enter data in Excel use formulae and calculations and create tables charts and pivot tables They will be familiar with basic statistical and financial measures of general use They will be able to do basic computations in statistics and finance in Excel Students will acquire the capacity to create personal and or business spreadsheets following current professional and or industry standards Their potential for critical thinking to design and create spreadsheets and communicate in a business setting using spreadsheet vocabulary will be enhanced

The educational background required for the student to understand the text is some basic English and Mathematics of school leaving level Some fl air for numbers will be an asset and for them it will be a breeze others will have to make an effort but ample illustrations and practice questions make life simple whether it is basic statistics or slightly intricate finance
