Implementing a crowd-sourced picture archive for Bad Harzburg

Rieke Freund, Jan Philip Rättsch, Franziska Hradilak, Benedikt Vidic, Oliver Heß, Nils Lißner, Hendrik Wölert, Jens Lincke, Tom Beckmann, Robert Hirschfeld, 2023-06-06 Pictures are a medium that helps make the past tangible and preserve memories Without context they are not able to do so Pictures are brought to life by their associated stories However the older pictures become the fewer contemporary witnesses can tell these stories Especially for large analog picture archives knowledge and memories are spread over many people This creates several challenges First the pictures must be digitized to save them from decaying and make them available to the public Since a simple listing of all the pictures is confusing the pictures should be structured accessibly Second known information that makes the stories vivid needs to be added to the pictures Users should get the opportunity to contribute their knowledge and memories To make this usable for all interested parties even for older less technophile generations the interface should be intuitive and error tolerant The resulting requirements are not covered in their entirety by any existing software solution without losing the intuitive interface or the scalability of the system Therefore we have developed our digital picture archive within the scope of a bachelor project in cooperation with the Bad Harzburg Stiftung For the implementation of this web application we use the UI framework React in the frontend which

communicates via a GraphQL interface with the Content Management System Strapi in the backend The use of this system enables our project partner to create an efficient process from scanning analog pictures to presenting them to visitors in an organized and annotated way To customize the solution for both picture delivery and information contribution for our target group we designed prototypes and evaluated them with people from Bad Harzburg This helped us gain valuable insights into our system s usability and future challenges as well as requirements Our web application is already being used daily by our project partner During the project we still came up with numerous ideas for additional features to further support the exchange of knowledge

provides resources or data through multiple endpoints or multiple controllers The data response displayed from graphql will be structurally the same as the data structure requested by the client GraphQL can provide multiple resources or data in one request Rest services should provide it with multiple urls The topics described in this book start from the explanation of graphql installation of the necessary libraries creation of asp net core web in visual studio use of ef core for database access sql server use of queries and mutations use of tools for graphql access use of logging and data loaders real time services with subscription implementation of asp net core identity use of jwt authentication deployment and many more The discussion in this book is carried out in stages so that it is hoped that after studying it readers will have sufficient skills or abilities to build GraphQL based services with ASP NET Core according to the needs in the field Hopefully this book can be another alternative as a learning resource for exercises tutorials or a reference for those who want to learn the backend programming of GraphQL API Services with ASP NET Core that is connected to SQL Server and PostgreSQL databases
