Controller Area Network Projects:

Controller Area Network Projects Dogan Ibrahim,2011 The Controller Area Network CAN was originally developed to be used as a vehicle data bus system in passenger cars Today CAN controllers are available from over 20 manufacturers and CAN is finding applications in other fields such as medical aerospace process control automation and so on This book is written for students for practising engineers for hobbyists and for everyone else who may be interested to learn more about the CAN bus and its applications The aim of this book is to teach you the basic principles of CAN networks and in addition the development of microcontroller based projects using the CAN bus In summary this book enables the reader to Learn the theory of the CAN bus used in automotive industry Learn the principles operation and programming of microcontrollers Design complete microcontroller based projects using the C language Develop complete real CAN bus projects using microcontrollers Learn the principles of OBD systems used to debug vehicle electronics You will learn how to design microcontroller based CAN bus nodes build a CAN bus develop high level programs and then exchange data in real time over the bus You will also learn how to build microcontroller hardware and interface it to LEDs LCDs and A D converters The book assumes that the reader has some knowledge on basic electronics Knowledge of the C programming language will be useful in later chapters of the book and familiarity with at least one member of the PIC series of microcontrollers will be an advantage especially if the reader intends to develop microcontroller based projects using the CAN bus The CD contains a special demo version of the mikroC compiler which supports the key microcontrollers including PIC dsPIC PIC24 PIC32 and AVR This special version additionally features an advanced CAN library of intuitive and simple to use functions to encourage programming with easy and comfortable development of CAN networks Advanced PIC Microcontroller Projects in C Dogan Ibrahim,2011-08-30 This book is ideal for the engineer technician hobbyist and student who have knowledge of the basic principles of PIC microcontrollers and want to develop more advanced applications using the 18F series The architecture of the PIC 18FXXX series as well as typical oscillator reset memory and input output circuits is completely detailed After giving an introduction to programming in C the book describes the project development cycle in full giving details of the process of editing compilation error handling programming and the use of specific development tools The bulk of the book gives full details of tried and tested hands on projects such as the 12C BUS USB BUS CAN BUS SPI BUS and real time operating systems A clear introduction to the PIC 18FXXX microcontroller s architecture 20 projects including developing wireless and sensor network applications using I2C BUS USB BUS CAN BUS and the SPI BUS which give the block and circuit diagram program description in PDL program listing and program description Numerous examples of using developmental tools simulators in circuit debuggers especially ICD2 and emulators A Controller Area Network Implementation for the Cornell University Hybrid Electric Vehicle Daniel S. Boucher,2003 **PIC Microcontroller Projects in C** Dogan Ibrahim,2014-04-08 Extensively revised and updated to encompass the latest developments in the PIC

18FXXX series this book demonstrates how to develop a range of microcontroller applications through a project based approach After giving an introduction to programming in C using the popular mikroC Pro for PIC and MPLAB XC8 languages this book describes the project development cycle in full The book walks you through fully tried and tested hands on projects including many new advanced topics such as Ethernet programming digital signal processing and RFid technology This book is ideal for engineers technicians hobbyists and students who have knowledge of the basic principles of PIC microcontrollers and want to develop more advanced applications using the PIC18F series This book Includes over fifty projects which are divided into three categories Basic Intermediate and Advanced New projects in this edition Logic probe Custom LCD font design Hi Lo game Generating various waveforms in real time Ultrasonic height measurement Frequency counter Reaction timer GPS projects Closed loop ON OFF temperature control Bluetooth projects master and slave RFid projects Clock using Real time clock RTC chip RTC alarm project Graphics LCD GLCD projects Barometer thermometer altimeter project Plotting temperature on GLCDEthernet web browser based control Ethernet UDP based control Digital signal processing Low Pass Filter design Automotive LIN bus project Automotive CAN bus project Multitasking projects using both cooperative and Round robin scheduling Unipolar stepper motor projects Bipolar stepper motor projects Closed loop ON OFF DC motor control A clear introduction to the PIC 18FXXX microcontroller s architecture Covers developing wireless and sensor network applications SD card projects and multi tasking all demonstrated with the block and circuit diagram program description in PDL program listing and program description Includes more than 50 basic intermediate and advanced projects

Intelligent Systems in Cybernetics and Automation Theory Radek Silhavy, Roman Senkerik, Zuzana Kominkova Oplatkova, Zdenka Prokopova, Petr Silhavy, 2015-04-24 This volume is based on the research papers presented in the 4th Computer Science On line Conference The volume Intelligent Systems in Cybernetics and Automation Control Theory presents new approaches and methods to real world problems and in particular exploratory research that describes novel approaches in the field of cybernetics and automation control theory Particular emphasis is laid on modern trends in selected fields of interest New algorithms or methods in a variety of fields are also presented The Computer Science On line Conference CSOC2015 is intended to provide an international forum for discussions on the latest high quality research results in all areas related to Computer Science The addressed topics are the theoretical aspects and applications of Computer Science Artificial Intelligences Cybernetics Automation Control Theory and Software Engineering

Understanding and Using the Controller Area Network Communication Protocol Marco Di Natale, Haibo Zeng, Paolo Giusto, Arkadeb Ghosal, 2012-01-19 This book to offers a hands on guide to designing analyzing and debugging a communication infrastructure based on the Controller Area Network CAN bus Although the CAN bus standard is well established and currently used in most automotive systems as well as avionics medical systems and other devices its features are not fully understood by most developers who tend to misuse the network This results in lost opportunities for better

efficiency and performance These authors offer a comprehensive range of architectural solutions and domains of analysis It also provides formal models and analytical results with thorough discussion of their applicability so that it serves as an invaluable reference for researchers and students as well as practicing engineers *Practical Microcontroller Engineering with ARM Technology* Ying Bai,2015-12-29 The first microcontroller textbook to provide complete and systemic introductions to all components and materials related to the ARM Cortex M4 microcontroller system including hardware and software as well as practical applications with real examples This book covers both the fundamentals as well as practical techniques in designing and building microcontrollers in industrial and commercial applications Examples included in this book have been compiled built and tested Includes Both ARM assembly and C codes Direct Register Access DRA model and the Software Driver SD model programming techniques and discussed If you are an instructor and adopted this book for your course please email ieeeproposals@wiley.com to get access to the instructor files for this book **Conference Proceeding. I Series Stephen Haag,James T. Perry,Amy Phillips,2002 The I Series Applications textbooks strongly emphasize that students learn and master applications skills by being actively engaged by doing These texts have been written with clear error free and unambiguous steps to accomplish tasks that lead to a finished document worksheet or database table The authors made the decision that teaching how to accomplish some task is not enough for complete understanding and mastery Prior to introducing steps the authors discuss why the steps students are about to experience are important and what role the steps play in the overall plan for creating a document workbook or database
