Guide to Information Sources in Mathematics and Statistics Martha A. Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free

Energy Landscapes, Inherent Structures, and Condensed-Matter Phenomena Frank H. Stillinger, 2015-11-17 This book presents an authoritative and in depth treatment of potential energy landscape theory a powerful analytical approach to describing the atomic and molecular interactions in condensed matter phenomena Drawing on the latest developments in the computational modeling of many body systems Frank Stillinger applies this approach to a diverse range of substances and systems including crystals liquids glasses and other amorphous solids polymers and solvent suspended biomolecules

Stillinger focuses on the topography of the multidimensional potential energy hypersurface created when a large number of atoms or molecules simultaneously interact with one another. He explains how the complex landscape topography separates uniquely into individual basins each containing a local potential energy minimum or inherent structure and he shows how to identify interbasin transition states saddle points that reside in shared basin boundaries. Stillinger describes how inherent structures and their basins can be classified and enumerated by depth curvatures and other attributes and how those enumerations lead logically from vastly complicated multidimensional landscapes to properties observed in the real three dimensional world. Essential for practitioners and students across a variety of fields the book illustrates how this approach applies equally to systems whose nuclear motions are intrinsically quantum mechanical or classical and provides novel strategies for numerical simulation computations directed toward diverse condensed matter systems.

Fundamentals of Renewable Energy Processes Aldo Vieira da Rosa, Juan Carlos Ordonez, 2021-02-06. Fundamentals of Renewable Energy Processes Fourth Edition winner of a 2022 Textbook Excellence Award. Microphysics of Atmospheric Phenomena Boris M. Smirnov, 2016-08-29. This book investigates elementary processes in the Earth's atmosphere involving photons electrons ions radicals and aerosols. It is based on global atmospheric models such as the standard atmospheric model with averaged atmospheric parameters across the globe and over time the Earth's energetic balance and the global electric circuit that allows to analyze fundamental atmospheric properties to be analyzed. Rate constants of elementary processes in the Earth's atmosphere together with measured atmospheric parameters and existing concepts of atmospheric phenomena are used in the analysis of global and local atmospheric processes. Atmospheric photoprocesses result from the interaction of solar radiation with the atmosphere and processes involving ions oxygen atoms excited atomic particles and ozone molecules. Atmospheric electricity as a secondary phenomenon to atmospheric water circulation results in a chain of processes that begins with collisions of water aerosols in different aggregate states. Cosmic rays are of importance for

atmospheric electricity as they create positive and negative ions in the air Air breakdown in an electric field of clouds in the form of lightning may develop under the influence of cosmic ray created seed electrons which are necessary for electron multiplication in ionization wave streamers The upper atmosphere ionosphere is formed under solar radiation in a vacuum ultraviolet spectrum and absorption of this radiation leads to air photoionization The greenhouse effect is determined by atmospheric water whereas transitions between a water vapor and aerosols may lead to a change in atmospheric optical depth Carbon dioxide contributes in small portions to the atmospheric greenhouse effect Cosmic rays are of importance for atmospheric discharge the origin of lightning and cloud formation in the first stage of aerosol growth This book provides a qualitative description of atmospheric properties and phenomena based on elementary processes and simple models
