Reliable Software Technologies, Ada-Europe ... ,2002 **Advanced Memory Optimization Techniques for Low-Power Embedded Processors** Manish Verma,Peter Marwedel,2007-06-20 In a relatively short span of time computers have evolved from huge mainframes to small and elegant desktop computers and now to low power ultra portable handheld devices Witheachpassinggeneration

computers consisting of processors, memories and peripherals became smaller and faster. For example, the first commercial computer UNIVAC I costed 1 million dollars, occupied 943 cubic feet space and could perform 1,905 operations per second.⁹⁴ Now a processor present in an electric shaver easily outperforms the early mainframe computers. The miniaturization is largely due to the efforts of engineers and scientists that made the expeditious progress in the microelectronic technologies possible. According to Moore's Law,⁹⁰ the advances in technology allow us to double the number of transistors on a single silicon chip every 18 months. This has led to an exponential increase in the number of transistors on a chip from 2,300 in an Intel 4004 to 42 millions in Intel Itanium processor.⁵⁵ Moore's Law has withstood for 40 years and is predicted to remain valid for at least another decade.⁹¹

Not only the miniaturization and dramatic performance improvement but also the significant drop in the price of processors has led to a situation where they are being integrated into products such as cars, televisions and phones which are not usually associated with computers. This new trend has also been called the disappearing computer where the computer does not actually disappear but it is everywhere.⁸⁵ Digital devices containing processors now constitute a major part of our daily lives. A small list of such devices includes microwave ovens, television sets, mobile phones, digital cameras, MP3 players and cars. Whenever a system comprises of information processing digital devices to control or to augment its functionality such as system termed an embedded system. Therefore all the above listed devices can be also classified as embedded systems.
