Exploring the Key Targets and Compounds That Manipulate Brain Neurocircuits Against Mental Disorders and Psychiatric, volume II Weijie Xie,Zezhi Li,Yuan Li,Song Zhang,Dereje Kebebe Borga ,Yuwei Wang,2025-08-26 With the development of brain science modulating neural circuits and brain networks is increasingly being considered a treatment for neurological disorders Neurological disorders can be precisely alleviated or reversed using optogenetic techniques and analysis of neural circuits and this also illustrates the shortcomings of traditional pharmacological manners that target single molecular targets such as GABA receptors with anti anxiety and 5 HT receptors with antidepressants While traditional psychotropic drugs are generally developed based on a single molecular target modulating neural circuits and neural networks by neuropharmacology approaches is a challenge that pharmacology must focus on and cope with in the future A recent study in Science Trieu et al Science 375 1177 1182 2022 has provided a novel insight into the precise regulation of the neural circuit and brain network functions Small molecular compounds enable the manipulation of brain neurocircuits and networks targeting the enriched

molecules or receptors thereby treating mental diseases Therefore we aim to explore the interactions between neural circuits and neuropharmacological approaches to intervene in mental disorders by promoting the translational application between basic and clinical research

The Mechanisms of Fibrotic Disorders and Pharmacological Therapies Yaying Sun ,Yanan Jiang,Wenyi Li,2025-05-21 Fibrosis characterized by uncontrolled extracellular matrix deposition is a common phenomenon seen in different organs and tissues bringing about disastrous influence on the function Fibrosis can be induced by aging and diseases such as sarcopenia during aging renal fibrosis following diabetes liver fibrosis following non alcohol fatty liver disease can be elicited by trauma or surgery such as shoulder stiffness and elbow stiffness and can also be a feature of the tumor in which is also known as epithelial mesenchymal transition Currently anti fibrosis therapies are investigated broadly while the complexity of this condition retards the development of effect modalities remarkably Therefore a better understanding of the mechanisms of fibrosis related disorders is of urgent need Recent decades have witnessed remarkable advancement in multi omic investigations and the progress of pharmacogenomics Countless potential targets are unveiled by integrating the data of genomics and pharmacology Since fibrosis and related disorders have various manifestations at the cellular level proteomic level and transcriptional level integrative analysis is of vital importance in identifying targets Moreover the interplay between different cells in fibrotic tissue is also finely described by single cell sequencing and spatial transcriptome et al greatly broadening the understanding of the progress of fibrosis Therefore this research topic aims to study the underlying mechanisms of fibrosis and related diseases with specific attention to molecular targets We welcome research revealing the mechanisms of fibrosis and studies to identify novel molecules against fibrogenesis
