User-Centered Agile Method Dominique Deuff, Mathilde Cosquer, 2013-10-28 Agile development methods began to emerge around 20 years ago However it was not until the early 2000s that they began to be widely used in industry This growth was often due to the advent of Internet services requiring faster cycles of development in order to heighten the rate at which an ever greater number of functionalities were made available In parallel user centered design UCD methods were also becoming more and more widely used hence user centered design and agile methods were bound to cross paths at least in the telecoms industry During this period in the field of telecommunications the explosion in the number of connected terminals Web applications new use environments particularly in a domestic setting etc meant it was crucial to gain a fuller understanding of users requirements and better evaluate the relevance and acceptance of services attempts to cater for these requirements Thus the user centered agile method as proposed in this book aims to mutually integrate two existing methods user centered design as used by ergonomists and the agile Scrum method as used by developers The user testing method is also covered Analyzing work on this subject spanning the past 10 years the authors also provide an assessment of the feedback on the user centered agile method The method described in this book has been based on all these sources It is a framework relying on the logic introduced by Scrum i e a framework based on project management The method proposed is seen as an extension of Scrum which is centered on humans because of the integration of user centered design and user testing Therefore the description of the user centered agile method is based on the basics of the agile Scrum method and uses its terminology and elements As well as descriptive elements of the user centered agile method practical examples of how to implement it are also provided
