International Handbook of Blockchain Law Thomas Richter, Matthias Artzt, 2024-08-14 Blockchain's significant advances since 2020 including a plethora of new use cases have necessitated a comprehensive revision of the first edition of this matchless resource. While new chapters and topics have been added, the handbook still follows the systematic and structured approach of the first edition. Each contributor, all of them practitioners experienced with blockchain projects within their respective areas of expertise and specific jurisdictions, elucidates the implications of blockchain technology and related legal issues under such headings as the following: understanding blockchain from a technological point of view; regulatory aspects of blockchain; smart contracts; data privacy; capital markets; crypto asset regulation in Europe, the UK, and the US; intellectual property and antitrust law. The foundational chapter on the technical aspects of blockchain technology has been meticulously expanded to elucidate the proof of stake consensus mechanism alongside fresh insights into the ERC 721 Token Standard for non-fungible tokens, decentralized exchanges, staking, stablecoins, and central bank digital currencies. As blockchain law cements itself as a distinct legal field, this new edition is poised to be an invaluable asset for legal practitioners in-house lawyers, IT professionals, consultancy firms, blockchain associations, and legal scholars. At a depth that allows non-IT experts to understand the groundwork for legal assessments, the handbook provides those charting the dynamic waters of this field of law with a compass, ensuring they are well-equipped to tackle the legal issues raised by the usage of blockchain technology.

Implementation of Smart Healthcare Systems using AI, IoT, and Blockchain Chinmay Chakraborty, Subhendukumar Pani, Mohd Abdul Ahad, Qin Xin, 2022-09-27 Implementation of Smart Healthcare Systems using AI, IoT, and Blockchain provides imperative research on the development of data fusion and analytics for healthcare and their implementation into current issues in a real-time environment. While highlighting IoT, bio-inspired computing, big data, and evolutionary programming, the book explores various concepts and theories of data fusion, IoT, and Big Data Analytics. It also investigates the challenges and methodologies required to integrate data from multiple heterogeneous sources, analytical platforms in healthcare sectors. This book is unique in the way that it provides useful insights into the implementation of a smart and intelligent healthcare system in a post-Covid-19 world using enabling technologies like Artificial Intelligence, Internet of Things, and blockchain in providing a transparent, faster, secure, and privacy-preserved healthcare ecosystem for the masses. Explains how IoT can be integrated into the healthcare ecosystem for better diagnostics, monitoring, and treatment. Includes AI for predictive and preventive healthcare. Describes blockchain for managing healthcare data to provide transparency, security, and distributed storage. Offers effective remote diagnostics and telemedicine approaches. Highlights the importance of gold standard medical datasets for improved modeling and analysis.
