## adaptations

**BIRD BEAKS** Name: \_\_\_\_\_

**Adaptations** are body parts that help a species survive in their environment. Each of the three species described below live in a different environment, which means that they will each have different body parts that help them. Read about each of the birds to learn about how their beaks are adapted for their habitats.

**Robin**  
Robins forage (search) for small bugs in the water. They eat watery insects, flies, and worms. Sometimes they also eat small fish. They capture these creatures by conforming to something different in the water with their beaks. Unlike anything else, they come from inside to outside, they take a slightly open to capture any prey. Sometimes robins may also catch at the water or even change their heads under water to grab prey that is deeper below the surface.

**Loon**  
Loons are carnivorous birds whose diet consists mostly of fish. Sometimes they eat tadpoles too. To capture their prey, loons hover above the fish and grab the unsuspecting fish or tadpoles with their beaks (the sharp edges on their feet). When it's time to eat, the loon holds the prey with one of its beaks and uses the back of the lower jaw to tear the fish off the bone with its beak.

**Pelican**  
Pelicans have mostly on fish. To catch their prey, pelicans usually swim down on a shallow part of the water above. Then they jump up to catch their prey. Returning to the water, the pelican will catch the lower part of their prey before swallowing the fish.

**Sparrow**  
Sparrows primarily eat small seeds and insects. These birds forage for insects for their prey by hopping on the ground. Sparrows are not concerned to see or catch or catch anything, and they will often take advantage of a bird feeder when it's around.

**Toucan**  
The toucan is a bird that primarily feeds on fruit. These birds live in the rain forest and eat a variety of fruits. Their beak is long enough to reach fruit on branches that wouldn't support the full weight of their body, and it has rounded edges that help to peel fruit. It's thought that the toucan's large beak may also play a role in courtship or both sexes.
