Policy Studies Stuart S. Nagel, 1988-11-22

Less fragmented than the author's earlier work this book synthesizes Nagel's perspective on the field of policy analysis. As the field's principal organizer and leading promoter, one is indebted to Nagel for his energy, enthusiasm, and resourcefulness. This volume is itself imbued with such qualities. It covers vast territory, insistently counters the skeptics, and develops original schema for evaluating the work of the field. Furthermore, as vintage Nagel, the book is highly structured with many definitions, lists, and prenamed series of ideas. The author provides numerous hypothetical examples of his points worked out in succinct formulas and terse explanations. Nagel is unswervingly convinced of the correctness of the rationalist perspective and anchors himself firmly in behaviorist political science while accepting the contributions from other social sciences. Not one to qualify a statement or beat around the bush, the author enunciates many guiding principles and values such as effectiveness, efficiency, and equity. Nagel discusses software options for those interested in conducting analysis with microcomputers. He also gives advice on teaching with computers. Important for graduate students and university libraries. Choice. The purpose of this work is twofold. First, it attempts to integrate the basic ideas that relate to policy studies. These include the definition of concepts, the establishment of criteria for judging policy studies research, and the clarification of policy goals. Second, the volume proposes to evaluate the methods of policy evaluation themselves and to assess the field as a whole. Designed to serve as a definitive analysis of policy studies, this volume covers basic concepts, research criteria, societal goals, and policy alternatives. It also examines analytic methods, optimizing statistics, quasi-experimentation, behavioralism, multicriteria decision making, evaluation research, legal analysis, and conflicting critiques of the field. It was written for researchers and instructors of public policy studies and will also assist public policy specialists and others interested in the application of social science and other fields of knowledge to important public policy issues. *MCDM* Milan Zeleny, 1984

Multicriteria Decision-Aid Philippe Vincke, 1992-07-27. Decision aid. Philippe Vincke, Université Libre de Bruxelles. Over the past decade, the discipline of multicriteria decision aid has been extensively developed in the world of mathematics. As its name indicates, multicriteria decision aid aims to give decision makers a tool which should enable them to advance in solving decision problems where several points of view must be taken into account. Written by one of the leading authorities in the field, this book provides a unique introduction to the foundations, models, and methods of multicriteria decision aid. Challenging the monocriteria decision aid approach to problem solving, Vincke presents us with a unique book which deals with preference modelling, the multiple attribute utility theory, the outranking approach, and interactive decision making methods in the same text. Multicriteria Decision aid is directed at graduates and postgraduates studying in the fields of management, operations research, decision analysis, and all those who in business and administration wish to take part in decision making through scientific reasoning. **Public Administration and Decision-Aiding Software** Stuart S. Nagel, 1990-10-16. This contributed volume offers a summary of the latest ideas and applications concerning decision making software as applied to administrative decision making and public policy making. Stuart Nagel, the editor of this work, defines

the essence of decision aiding software to be software that is designed to enable users to process a set of 1 goals to be achieved 2 alternatives available for achieving them and 3 relations between goals and alternatives in order to choose the best alternative combination allocation or predictive decision rule Containing contributions from both practitioners and theorists this book should be of immediate value to those professionals involved in the field of public administration The book is organized in terms of the major fields of public administration which have been divided into staff procedural activities and into line substantive activities The first part of the book deals with cross cutting procedures including organization theory policy analysis and financial management The second part deals with substantive chapters including criminal justice health environmental energy and transportation as administrative fields The third part of the book involves chapters which combine procedures and substance It includes developmental policy with chapters emphasizing the perspectives of people from developing countries toward the relevance of computers and decision aiding software It also includes the perspective of people from more developed countries trying to apply policy analysis methods to developmental policy The third part also deals with public administration education It emphasizes data banks that are available through telecommunications systems to aid in teaching various aspects of public administration procedures and substance This book should be of interest to public administrators and scholars of the field
