Dna Science A First Course:

DNA Science David A. Micklos, Greg A. Freyer, David A. Crotty, 2003 This is the second edition of a highly successful textbook over 50 000 copies sold in which a highly illustrated narrative text is combined with easy to use thoroughly reliable laboratory protocols It contains a fully up to date collection of 12 rigorously tested and reliable lab experiments in molecular biology developed at the internationally renowned Dolan DNA Learning Center of Cold Spring Harbor Laboratory which culminate in the construction and cloning of a recombinant DNA molecule Proven through more than 10 years of teaching at research and nonresearch colleges and universities junior colleges community colleges and advanced biology programs in high school this book has been successfully integrated into introductory biology general biology genetics microbiology cell biology molecular genetics and molecular biology courses The first eight chapters have been completely revised extensively rewritten and updated The new coverage extends to the completion of the draft sequence of the human genome and the enormous impact these and other sequence data are having on medicine research and our view of human evolution All sections on the concepts and techniques of molecular biology have been updated to reflect the current state of laboratory research The laboratory experiments cover basic techniques of gene isolation and analysis honed by over 10 years of classroom use to be thoroughly reliable even in the hands of teachers and students with no prior experience Extensive prelab notes at the beginning of each experiment explain how to schedule and prepare while flow charts and icons make the protocols easy to follow As in the first edition of this book the laboratory course is completely supported by quality assured products from the Carolina Biological Supply Company from bulk reagents to useable reagent systems to single use kits thus satisfying a broad range of teaching applications *DNA Science* David A. Micklos, Greg A. Freyer, David A. Crotty, 2003

Dna Science: A First Course, Second Edition Micklos, 2005-01-01 This is the second edition of a very successful textbook that combines an illustrated narrative text with 12 rigorously tested reliable lab experiments in molecular biology developed at the internationally renowned Dolan DNA Learning Center of Cold Spring Harbor Laboratory Proven through more than 10 years of teaching in research and non research colleges and universities junior colleges community colleges and advanced high school biology programs DNA Science has been successfully integrated into introductory biology general biology genetics microbiology cell biology molecular genetics and molecular biology courses The Text has been completely revised extensively rewritten and updated The new coverage extends to the completion of the draft sequence of the human genome and the enormous impact these and other sequence data are having on medicine research and industry The laboratory experiments cover basic techniques of gene isolation and analysis that will be successful even in the hands of teachers and students with no prior experience Extensive prelab notes at the beginning of each experiment explain how to schedule and prepare while flowcharts and icons make the protocols easy to follow The laboratory course is completely supported by quality assured products from the Carolina Biological Supply Company from bulk reagents to usable reagent systems to

single use kits thus satisfying a broad range of teaching applications *DNA Science* David A. Micklos, Greg A. Freyer, 1990
This laboratory text combines the theory practice and applications of recombinant DNA technology into one articulated package Unlike super texts that can only be sampled by even the most ambitious instructor or student *DNA Science* is designed to be read from cover to cover The eight text chapters are written in a semi journalistic style and adopt a historical perspective to explain where DNA science has come from and where it is going Combining the unique perspectives of both a research biologist and a science writer the topical treatment integrates up to the minute examples drawn directly from the research literature Extensively tested by thousands of high school and college teachers and students in 25 states and Canada the ten laboratory experiments cover the basic techniques of gene isolation and analysis The experiments engender systematic repetition to build student confidence and mastery of techniques Extensive prelab notes at the beginning of each experiment explain how to schedule and prepare and flowcharts and icons make the protocols easy to follow The laboratory course is completely supported by quality assured Carolina Biological Supply Company products from bulk reagents to reusable reagent systems to single use kits satisfying a range of teaching applications Truly a first course in recombinant DNA technology the laboratory sequence presupposes no prior experience on the part of the instructor or student Structured to follow directly from an introduction to principles of biology the experiments are equally appropriate for the advanced high school student and the beginning college student The book can be used as the first course in a molecular biology sequence be integrated as a genetics DNA structure component of a general biology course or be used as a unit within a microbiology or genetics course The text is suitable for introducing recombinant DNA in science and society courses **DNA Science** David A. Micklos, 1988 *DNA Science*, 1988 **DNA Science ...** Micklos, 1990 *DNA Science* David A. Micklos, 2003
